ABSTRACT

PROBLEM TO BE SOLVED: To give a solution of the problem of deciding the successful bidder of such a combination auction where bidding of large amount of transaction object (merchandise) is performed when there are many kinds of and a large amount of stocks.

SOLUTION: After-mentioned two kinds of restrictions are given to the combination of allowable merchandise . 1. Single bidding can be performed with respect to only one kind of merchandise. 2. The involution relation of the combination of biddable merchandise has hierarchical structure. The optimal partial set of biddings is selected from the set of the biddings restricted like this by applying a dynamic programming.

ABSTRACT

PROBLEM TO BE SOLVED: To make sell various kinds of wrapped commodities able to be sold with a common rack structure, to collectively gather plural commodities sepa rately conveyed from the rack to be able to be taken out of a commodity take-out port and thereby to improve the service efficiency for an automatic vending machine with a purchase method for offering plural wrapped commodi ties selected by a customer at a definite price.

SOLUTION: This automatic vending machine is equipped with a commodity storage rack 2 for storing various kinds of the wrapped commodities 1 classified according to brands, and a cup supply mechanism 4 for supplying a commodity gathering cup 3 for accommodating the plural commodities taken out of the commodity storage rack 2. The commodity gathering cup is conveyed from the cup supply mechanism to a vending stage 3 of the commodity take-out port based on a sale command, and then the plural commodities selected by the customer are taken out of the commodity storage rack in order so that the commodities can be collectively gathered in the cup and taken out of the commodity take-out port.

ABSTRACT

PURPOSE: To provide an interior coordination implement with which interior finishing materials having the feel of integration over the entire part bolstered by color scheme theory and offering the high degree of customer satisfaction are effectively and rapidly selectable and interior coordination boards formed by using the same.

CONSTITUTION: This interior coordination implement consists of (A) a check sheet recorded with customers' requests for the interior finishing materials, (B) a color image scale consisting of plural transparent films regulating respective image zones and color matrices stating color samples and color codes in combination and (C) a product list by color symbols of the interior finishing materials rearranged with color numbers (grade numbers) by color symbols. Various kinds of the interior coordination boards are formed by using such implement.

ABSTRACT

PURPOSE: To offer plural kinds of service at the same time by adding the sales price of an article to the cumulative proceeds in an amount memory when a judging means judges that the articles is a service object article.

CONSTITUTION: This processor is equipped with the judging means which reads decision data corresponding to article identification data out of a decision data memory stored with decision data indicating whether or not articles are service object data and then judges that an article purchased by a customer is one of the service object articles. Then when the service object article is judged, the sales price of the article is added to the cumulative proceeds in the amount memory. Consequently, articles to be sold can be classified optionally into nondiscount articles, normal discount articles, double discount articles, etc., and service data corresponding to them can be obtained.

Abstract (Basic): KR 2002044504 A

NOVELTY - A method for an Internet race betting game through a data network is provided to offer a fair game by using an index noticed in public via various media and to enlarge the understanding on various indexes by making game participants apply the study and materials.

DETAILED DESCRIPTION - The method comprises the steps of the game participants connecting to a site by using user computers(1-3,1-4,1-5) and authenticated by an authentication system, storing prepared materials by using a manager module, applying a right to participate in a game to the participant, the user receiving the information furnished by the manager module, the game participant analyzing and predicting the level of fluctuation, the user predicting the result of weights combination of respective items by using a simulation system and confirming a predicted list, the game participant joining in a game corresponding to a rule, inputting rise and fall points of an index via a real-time data input system, relaying the scene of the game to the game participant in real time, and paying the game participant for a share in proportion to a dividend rate.

Abstract (Basic): KR 2002024625 A

NOVELTY - An electronic commerce system for dental materials and a method thereof are provided to make out a list of goods and to offer a personal warehouse, in case that a user purchases various kinds of goods, such as dental materials, so that the user can directly purchase desired goods through the warehouse list.

DETAILED DESCRIPTION - A processing circuit installed in an operator computer is comprised of an operating processor(20), a RAM(22), a data storage part(30), a bus controller(40), a ROM(50), a peripheral port(60), a mail transfer part(70), and a database part(70). The operating processor(20) covers the operation of the whole system and operation processing. The RAM(22) is a general non-volatile memory. The data storage part(30) keeps an interested article data(32) to store a user's interested articles and a purchased article data(34) to store the details of purchased articles. The mail transfer part(70) is in charge of mail transmission. The database part(70) stores various kinds of data. The operating processor(20), the RAM(22) and the data storage part(30) are connected through the bus controller(40). The bus controller(40) is connected to the ROM(50), the peripheral port(60), the mail transfer part(70) and the database part(70) through input/output buses. The database part(70) comprises a member database(82), a goods database(84), and a goods group database(86).

Abstract (Basic): WO 200237228 A2

NOVELTY - The method involves accessing a competency profile of an individual. The profile is accessible to a server on a network. The individual's competency profile is compared with an education template accessible to the server. The template defines a current desired standard for the individual's competencies to identify target learning areas.

DETAILED DESCRIPTION - Information content is offered over the network to the individual relevant to the target learning areas. The content is provided via user-selectable items of information content that collectively have several information product types.

INDEPENDENT CLAIMS are included for a method for screening for individuals having a desired knowledge set, for an education knowledge base resident on a digital computer system and for a method of providing personalized education over a network.

USE - For providing personalized education to an individual over a network.

ADVANTAGE - Defines current desired standard for user's competencies to identify target training or learning areas.

DESCRIPTION OF DRAWING(S) - The figure shows a system for providing a personalized educational environment.

US 6246998	B1		G06F-017/60	

Abstract (Basic): GB 2347241 A

NOVELTY - The home shopping system permits a customer to browse through a virtual grocery store, select items to purchase, and allocate the items to a virtual shopping cart prior to transaction. Purchased items are allocated to various categories including their environmental storage requirements, and the virtual basket is configured to display items on a shopper's screen such that the shopper may immediately know the amount of items allocated to each category.

DETAILED DESCRIPTION - The home shopping system organizes and categorizes purchases made through an Internet based shopping system. Products offered for sale over the Internet are contained in a server's PLU and each are associated with weights and volumes or capacity, environmental storage requirements and nutritional content indicia. As items are selected for purchase, and placed in a virtual shopping basket, a user may evaluate the contents of the shopping basket in accordance with any of these. INDEPENDENT CLAIMS are included for; a

USE - Organizing and categorizing purchases made through an Internet based home shopping system.

ADVANTAGE - Provides Internet based home shopping customers with weights and measures information such that they may compile or edit their virtual shopping basket as necessary.

DESCRIPTION OF DRAWING(S) - The drawing shows a semi-schematic block diagram of the server portion of the shopping system of the invention.

Abstract (Basic): JP 11237973 A

NOVELTY - An adding unit outputs the data indicating the product of the multiplied and multiplier data based on the output of the final stage adder. Symbol extenders (3-9) perform the symbol extension of the data corresponding to the lower-order bit of the multiplier data.

DETAILED DESCRIPTION - A one-bit extender (1) outputs data containing more than one bit used in performing a single-bit extension of the multiplied data. A partial product generating unit generates the corresponding partial product data from the extender and the multiplier

data based on a corresponding algorithm. The generated partial product data are combined by adders (10-16).

USE - For digital signal processing apparatus.

ADVANTAGE - Reduces circuit scale by reducing number of bits that should be combined by adders. Offers marked improvement in chip layout of multiplier. DESCRIPTION OF DRAWING(S) - The figure shows the component block diagram of the tree-type multiplier. (1) One-bit extender; (3-9) Symbol extenders; (10-16) Adders.

Abstract (Basic): US 5950893 A

NOVELTY - Two connector rings (24,36), through which a strap (12) is looped and slid, are respectively positioned between two pairs of buckles (28,46,34,48) and attached to a predetermined item (10) adjacent to the ends of strap. The corresponding pair of buckles are coupled and disengaged to respectively shorten and increase the length of a strap, according to the sliding of strap through the rings.

DETAILED DESCRIPTION - Both ends of the strap are coupled to the attachments (16,20) on both end sides of the item. Each buckle is provided with a latching mechanism for coupling and decoupling with the corresponding buckle pair, and a loop through which strap is slidably fitted. An intermediate handle section (53) with a pad (22) is provided along the strap between two buckles.

USE - For e.g. luggage, valise, suitcase, duffle bag, golf bag, purse, sport bag.

ADVANTAGE - Can be utilized to various items and articles without significant conversion of the item and article to incorporate or combine with low-cost strap construction. Offers lock feature for improving security of item associated with the strap. Provides numerous types and styles of center handle and pad configurations based on the length adjustment of the strap.

DESCRIPTION OF DRAWING(S) - The figure shows the side elevation view of a convertible strap and handle configuration.

Abstract (Basic): JP 9300730 A

The printer has a memory (7) and an input unit (10) e.g. key pad
that stores and inputs a food item and its cooking time, respectively.
The period of time allowed to sell the food is determined by an
operation unit (8) after searching the cooking time and adding it to
the current time. The allowable selling time is recorded on a label by
a printing unit (5).

ADVANTAGE - Offers safe practice for consumers when purchasing
food as well as good selling management for manufacturers with provided
information on food labels. Uses simple structure for label printer
with general purpose PC provided with large-size keyboard and
communication units which sets work time easily for every food item.
Ensures efficient utilisation of memory unit by grouping several
food items. Allows automatic correction in simple time unit
management since recording work list is utilised containing
manufacturing and expiry periods of food items. Offers safe and
reliable food selling management to consumers since automatic reading
discrimination unit is used together with cache air register to
eliminate accidental selling of expired food items.

Abstract (Basic): WO 8402493 A

Machine has a vertical cylindrical tower for force feeding material via at least one outlet to one or more working units on a frame comprising a central cylinder and fixed platforms. Each washing unit is divided into sectors each having a press and/or other form of moulding device plus ancillary processing and ejection equipment as appropriate and a carousel to convey moulds or mouldings from one stage to another. The type of press and ancillary equipment depends on the required prods.

USE/ADVANTAGE - For continuous and automated mfg. of agglomerated, sintered, vulcanised, or fused metal, rubber or plastics articles obt'd. by compression, such as brake linings, fibro-cement pipes, pneumatic tyres (new or remould), for example using a carousel with six sectors of 25 tyre moulds each and an output of 25 tyre/4 min or 9000 tyres/day. For a relatively modest increase, 2m, in overall dia., a machine with 10 sectors of 25 moulds can increase the nominal output rate from approx. 3 million tyres/year to between 5 and 6 million, depending on the type of tyre. Compared with conventional equipment dedicated to processing specific materials producing a range of individual articles, the equipment requires reduced overall dimensions, is versatile and offers a high productivity. (144pp Dwg.No.0/2)

EP 128913 A

A plant for the continuous and automated manufacturing of agglomerated, sintered, vulcanised or pressed articles from minerals, plastic materials, mixtures, metals or alloys, notably comprising at least one element acting as a press (69, 16) to press materials fed into a mould (232) by at least one feeding element (6), at least one element (22, 241, 367, 501) for the thermal, chemical, mechanical or

similar treatment of pressed articles and at least one device (207, 587) to remove finished products, and characterised by the fact that the device (6) for feeding the materials is mounted in a fixed position on the frame of the plant. The frame is formed by a central cylinder (1) and platforms (2, 4, 5, 7), which are adjustable in order to feed one or more working units positioned on the frame around the feeding elements of the feeding device (6), whereby each working unit is divided into fixed sectors in relation to the plant frame, each comprising an element acting as a press (69, 168), a treatment element (92) and an element for moving or removing the product from the mould, which are all tightly fixed on the plant frame. The element acting as a press is made up of an auxiliary press (69) mounted from the bottom on the lower platforms (2,4) and a main press (168) mounted from the top on the upper platforms (5, 7) so that a carousel (223) may revolve in the space between the two presses and above the other fixed sectors. The carousel is equipped with an equal number of mobile sectors for transporting mould elements (232, 395) or the mould (531 to 538), or even the formed articles (725, 726) from one fixed sector of a working unit to the next fixed sector of the working unit.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a display method by which a state to be displayed is diversified even while reducing quantity of image data to be prepared in an image of reference **merchandise** to be displayed in the case of sale of the **merchandise** and a selling method of the **merchandise** using the same.

SOLUTION: When prescribed **merchandise** is sold or service is offered at a site connected with a communication network of the Internet, etc., the **merchandise**, etc., are displayed in a form of an **aggregate** in which **plural components** such as **parts** are collected in the case of displaying sample images of the **merchandise**, etc., on a site picture to be provided by the site. In this display, display of design of areas to display the respective components in the sample images is constituted to be changeable by every area. Then the entire display of the sample images is changed in a form to reflect the design to be changed by selecting the design of the area to display the components among prepared variation and displaying the design as separately changing it by every area when a person to access the site makes decision of purchase of the **merchandise**, etc.

ABSTRACT

PURPOSE: To diversify games and improve game effects by offering a given prize, when a combination of plural divided information parts forms a given image pattern.

CONSTITUTION: A game machine is equipped with a variable display device 4 at the center of a game zone 3 formed in front of a game board 1, where character images decorating special and common patterns are displayed on a

display section 5 of the variable display device 4. A variable prize-winning ball device 10 is placed below the variable display device 4, and a variable display 17 is provided with plural display zones. The variable display device 4 is also equipped on one side with a common pattern display section 26, which is monolithically connected to a variable prize-winning ball device 24. Image information that shows a big hit/failure or announced check is divided into plural information parts. The process of deriving a big hit/failure and the derived results can be known by the process of orderly displaying divided information and conditions under which divided information is arranged.

ABSTRACT

PURPOSE: To offer the input device for winning racer voting information providing the operation panel which can designate the ticket of set number of a plurality of sets.

CONSTITUTION: The fixed title 3' indicating the 36 set numbers of 1,1-8,8 which are the combination of one to eight frames victories is displayed on the operation panel, and the money amount input section 17 consisting of money displays 11-13 by sets, money unit display 5', cancel button 14, and money buttons 15, 16, is provided. When tickets are purchased by 1,000 Yen, then the money button 16 is depressed once. The signal (a) is output and the monostable circuit 25 is triggered and the counter 21 is advanced by one step. The output A of the counter 21 is displayed on the money display 13, and after the total money is confirmed at the total display section 18, when the ticket issue button 19 is depressed, the tickets of several kinds to be desired can be obtained. In case of purchase of 10,000 Yen or more, the money button 15 can only be depressed for desired number of times.

Abstract (Basic): WO 200283194 A1

NOVELTY - An engineered osteoconductive or osteoinductive
biostructure (200) (A) comprises interconnected particles forming a
matrix having at least one of porous portion. The matrix has an
engineered microstructure, mesostructure and macrostructure (210),
which are the porous portion of the matrix.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the
following:

(1) a biostructure (B) comprises several particles joined
directly each other, the space within the biostructure not occupied by
the particles comprising pores having unimodal pore size distribution
within the interval 2-50 microns and having a median pore size of 10-15
microns;

(2) a biostructure (C) comprises several particles joined

together and at least one mesostructure having a first layer of interconnected particles and second adjacent layer of interconnected particles having a region of increased porosity, the mesostructure having shortest dimension, whose smallest value is at least one particle diameter and less than 20 particle diameter and longest dimension measured along a path, which can be irregular, from a first end to a second end, which is at least 10 times the shortest dimension. The first end and the second end of the path may each be dead end within the biostructure or an external surface of the biostructure or a branched point;

(3) a biostructure (D) comprises several particles joined directly each other, the space within the biostructure not being occupied by the particles comprises pores having bimodal pore size distribution within the interval 2-200 microns and having a peak in the pore size distribution at 10-15 microns and another peak larger than 25 microns;

(4) a bone augmentation or tissue scaffold biostructure (E) involves bone particles and at least one binder substance connecting the particles in a three dimensional matrix, (the matrix includes a microstructure, mesostructure and/or macrostructure and having at least one of a non-uniform cross-section, non-straight path or branching);

(5) manufacturing (M1) an engineered regenerative biostructure (ERB);

(6) a biostructure (F) comprises:

(a) particles joined together to form a porous matrix having a first suspension of particles deposited in selected regions,

(b) a second suspension of particles selectively deposited in locations other than the first suspension in the region, and

(c) at least one of a binder material binding the first and the second suspension of particles into a porous matrix, (the particles of first suspensions being joined directly to particles of the second suspension in pre-determined places, and the particles of the first suspension and the second suspension being in a porous matrix);

(7) depositing (M2) a layer of powder;

(8) apparatus (A1) for depositing a layer of powder onto a build bed comprises: (a) at least two suspension reservoirs,

(b) device for connecting the suspension reservoirs to a common nozzle,

(c) device for switching among the suspension reservoirs at predetermined times so that at any given time only one suspension reservoir is connected to the nozzle, and

(d) a motion control system for moving the nozzle relative to the build bed;

(9) apparatus (A2) for depositing a layer of powder onto a build bed comprises:

(a) at least two suspension dispensers aimed at the build bed,

(b) device for activating individual suspension dispensers at pre-determined times, and

(c) motion control system for moving the dispensers relative to the build bed;

(10) a biostructure (G) comprises: a porous three-dimensional matrix and interpenetrant network interlocking with the matrix, the interpenetrant network containing an interpenetrating material that is water-soluble and is solid or semi-solid at room temperature;

(11) manufacture of (M3) a biostructure;

(12) a biostructure (H) has particles joined together to form a porous matrix comprising several layers having particles, and at least one of a binder material binding the particles into a porous matrix. In the predetermined places, the particles have a first composition and in other predetermined places, the particles have a second composition, which can be chemically derived from the first composition;

(13) manufacturing (M4) a biostructure;

(14) a biostructure (I) comprises: a matrix-material network, having matrix-material network surface and in at least a first region of the biostructure, on the matrix-material network surfaces, at least one interpenetrant material, such that the matrix material and the

interpenetrant material together form a matrix-material-plus-interpenetrant network. The space not occupied by the matrix-material-plus-interpenetrant network forms a non-(matrix-material-plus-interpenetrant) network, which interlocks with the matrix-material-plus-interpenetrant network. (I) is manufactured by preparing the matrix-material network by three-dimensional printing, infusing the matrix-material network with a solution comprising a polymer dissolved in a solvent, draining solution and allowing or causing the solvent to evaporate; and 15) manufacturing (M5) a biomedical biostructure.

USE - As bone substitute (for bones selected from ethmoid, frontal, nasal, occipital, parietal, temporal, mandible, maxilla, zygomatic, cervical vertebra, thoracic vertebra, lumbar vertebra, sacrum, rib, sternum, clavicle, scapula, humerus, radius, ulna, carpal bones, metacarpal bones, phalanges, ilium, ischium, pubis, femur, tibia, fibula, patella, calcaneus tarsal and metatarsal bones and condyle) e.g. synthetic bone implant; as tissue scaffold (claimed).

ADVANTAGE - The engineered regenerative biostructure (ERB) provides improved bone-in-growth; controlled, repeatable resorption characteristic and osteoconductivity; improved durability during shipping and intraoperative handling; advantages of autograft bone without the need to conduct an additional surgery and the necessary healing of a second site where autograft bone is harvested. ERB offers same advantages of off-the shelf bone filler materials. But eliminates variability in tissue response due to the random distribution of pore size and internal structure.

DESCRIPTION OF DRAWING(S) - The figure shows an engineered regenerative biostructure.

NOVELTY - The specialized merchandising system has several partitioned sections and a multipurpose customer interaction center (20) with several computer terminals. Products /services offered in

each divided section, and the interior designs and colors of each section reflect characteristics of several groups of customer with respect to age, gender, race or personal interest.

USE - Specialized merchandising system in retail establishments including grocery stores, department stores, supermarkets, wholesale clubs, etc.

ADVANTAGE - Provides access to information and services accommodating the intended customers of all age groups having unique personal interests, in one location, hence provides pleasant shopping experience for the customers. Offers product and services to meet most of the needs of particular type of consumer.

DESCRIPTION OF DRAWING(S) - The figure illustrates a floor plan for merchandising system.

AU 200226981 A C07D-000/00 Based on patent WO 200244143

Abstract (Basic): WO 200244143 A2

NOVELTY - A system for electro-kinetic separation of charged molecules in at least one sample in a microtiter plate comprises several wells comprising a capillary tube fluid circuit connecting first and second wells, and first and second electrodes for applying an electric current across the circuit, where the circuit is filled with a liquid and comprises a detection section, is new.

DETAILED DESCRIPTION - A system for electro-kinetic separation of charged molecules in at least one sample in a microtiter plate comprises several wells comprising:

- a first microtiter plate well containing a liquid;
- a second microtiter plate well containing a liquid within the

same microtiter plate as the first well;

(c) a capillary tube fluid circuit connecting the first and second wells and comprising a detection section to detect the passage of a molecule and filled with a liquid; and

(d) a first and second electrode for applying an electric current across the capillary tube fluid circuit, where the electrodes are connected to a power supply and are electrically contacted with the two wells respectively, is new.

An INDEPENDENT CLAIM is included for performing electro-kinetic analysis of a sample located in a microtiter plate well using the system involving:

(1) forming at least one separatory unit by placing a first end of the capillary tube fluid circuit and the first electrode into the first microtiter well containing a sample mixture in the liquid and placing a second end of the capillary tube fluid circuit and the second electrode into the second microtiter well;

(2) energizing the electrodes to apply a first electric field across the capillary tube fluid circuit for loading the sample mixture into the capillary tube fluid circuit;

(3) removing the first and second ends of the capillary tube fluid circuit from the first and second sample wells;

(4) transferring the two ends of the capillary tube fluid circuit to a third and fourth well respectively;

(5) applying a second electric field across the fluidic circuit to effect separation of the sample mixture; and

(6) detecting the electrophoretic migration of the molecule through the detection section of the capillary tube fluid circuit, where the third and fourth wells containing a liquid are both contained within a single microtiter plate and are in electrical contact with the third and fourth electrodes respectively.

USE - For electro-kinetic separation of charged molecules in at least one sample in a microtiter plate (claimed), useful to electrophoretically separate molecules in a sample, which are differently charged or which have different electrophoretic mobilities e.g. to detect the enzymatic modification of peptide substrates by phosphatases, proteases and kinase. Also useful for separating simple mixtures, which are ideal for high throughput screening applications; and to separate the analytes of same charge with different electrophoretic mobilities in solution.

ADVANTAGE - The method is capable of detecting the enzymatic conversion of the substrate (at least 10, preferably at least 1, especially at least 0.1%). The system is capable of electro-kinetically acting on several samples at the same time, comprises several separatory units. The detection section of the fluid circuit is transparent to facilitate the detection of the molecule by light-based device including fluorescence, luminescence, absorption spectroscopy, etc. The electroosmotic flow is used to facilitate the transport of the analytes towards the detection section of the fluid circuit. The system permits the rapid analysis of a large number of samples by free solution electro-kinetic flow in a standard microtiter plate-sized footprint. The method offers the production of consistent, spaced separatory units, which may be easily handled after assembled, and forms the capillary fluid circuits.

AU 200192226	A		A41D-013/05	Based on patent WO 200219851
--------------	---	--	-------------	------------------------------

Abstract (Basic): WO 200219851 A1

NOVELTY - A wide back protection (10) comprises a protective shell (12) with several stiff cross segments (14) adjacent each other and mutually hinged. The segments have a mutually resting outer plate (16) and an edge (18) that allows arching the protection forward and limits the protection backwards with respect to the erect position.

USE - For use in dynamic sports.

ADVANTAGE - The inventive protection provides comfort to the wearer and behaves as a flexible assembly if one tries to bend it backwards beyond the natural arching of the vertebral column. Its lack of a direct joint between its cross segments enables to fold up on itself making its overall dimension as small as possible when it is not used. The tapered shell edges offer less resistance to sliding in case of fall on corners. It has a high resistance/weight ratio without limiting the back forward arching during driving, still allowing to effectively stop the backward arching in case of impact within the protected surface.

DESCRIPTION OF DRAWING(S) - The figure represents a schematic view of the inventive protection for motorbikers placed on a user's back.

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 20020043501	A1	17	B01D-024/00	Provisional application US 2000226962

Abstract (Basic): US 20020043501 A1

NOVELTY - A liquid stream is treated by flowing it upwards through an upright adsorber vessel containing porous adsorbent particulates comprising 8-48 Tyler mesh range with a size distribution that permits bed expansion of no greater than 10%, contacting the liquid stream with the adsorbent particulates, removing impurities from the adsorbent, and recycling the adsorbent through the adsorber vessel.

DETAILED DESCRIPTION - Treatment of a liquid stream to remove impurities having a greater affinity for porous adsorbent particulates than the components in the liquid do, involves flowing the liquid stream upwardly through a first upright adsorber vessel containing porous adsorbent particulates at a flow rate to establish fluidized bed performance between the porous adsorbent particulates and the liquid stream; contacting the liquid stream with the adsorbent particulates with residence time sufficient for impurity adsorbance that removes impurities in the liquid stream to produce a purified liquid stream that has a reduced impurity concentration and an impurity-bound adsorbent; discharging the purified liquid stream from the adsorber vessel; withdrawing the impurity-bound adsorbent in a slurry from the adsorber vessel; processing the impurity-bound adsorbent to remove impurities and produce a regenerated adsorbent; and recycling at least a portion of the regenerated adsorbent through the adsorber vessel. The porous adsorbent particulates comprise 8-48 Tyler mesh range with a size distribution that permits bed expansion no greater than 10%.

INDEPENDENT CLAIMS are included for the following:

(a) a facility for use in removing impurities from a liquid stream, which comprises an adsorber vessel containing porous adsorbent particulates;

(b) the use, for more than one adsorption vessel in the adsorption section, of part of the liquid adsorption stream from the preceding adsorption vessel closer to the fresh feed as a liquid lift for the withdrawn slurry from the succeeding vessel to reduce the pumping head required for the major part of the liquid adsorption stream that enters as feed to the succeeding vessel;

(c) the use of an enlarged diameter at the top of an adsorption vessel to facilitate separation of the solids from the liquid while reducing the height for a given bed inventory in the top stage of an adsorption vessel and permitting lift liquid to be used without any increase in superficial velocity for the liquid in the fluidized beds below the enlarged diameter section;

(d) the use of a smaller diameter activated alumina or other

suitable adsorbent in an upflow vessel as a filtering medium for the fresh feed to ensure removal of scale or other possible debris from dirtier feeds, e.g. coker or visbreaker distillates, and to preclude non-regenerable poisons e.g., silicon compounds or iron from contaminating the circulating adsorbent used; and

(e) the use of screened, smaller diameter adsorbent solids discarded long term from the regenerator as a filtering medium for the fresh feed to be treated to ensure removal of scale and other possible debris or non-regenerable poisons from contaminating the circulating adsorbent used.

USE - Used for treating a liquid stream to remove impurities having a greater affinity for porous adsorbent particulates than the components in the liquid do.

ADVANTAGE - The method improves process efficiencies in the removal of impurities from liquid flow streams, including increased yield of adsorption treated product; improved quality in the treated product, e.g. improving the octane number for gasoline feedstocks; and reduction of the utilities that are required to process a given liquid flow stream through use of superior regeneration processes and apparatus. It extends process utility to various liquid flow streams that were not amenable to prior processes, and offers reacting gas source flexibility and/or reduces the required hydrogen use or reactivating gas for treating a given hydrocarbon feedstock.

DESCRIPTION OF DRAWING(S) - The figure is a process schematic diagram illustrating method and apparatus for use in an adsorber/regenerator facility.

Abstract (Basic): US 20020026169 A1

NOVELTY - A disposable absorbent material, such as diaper comprises a second fibrous layer having Klemm's water absorbency of less than 35 mm but more than Klemm's water absorbency of a liquid-permeable top sheet (2) by 15 mm or more, and a third fibrous layer which has Klemm's water absorbency of at least 35 mm but more than Klemm's water absorbency of the second fibrous layer by 15 mm or more.

DETAILED DESCRIPTION - A disposable absorbent material comprises a liquid-absorbent core (4) disposed between the liquid-permeable top sheet and liquid-impermeable back sheet (3). The top sheet comprises plastic film layer sections (6) each having upper and lower surfaces and has thickness of 0.001-0.05 mm. Liquid-pervious openings are defined between respective pairs of adjacent plastic film layer sections. A first fibrous layer is bonded to the lower surfaces of the plastic film layer sections and immediately underlying the openings. The top sheet has Klemm's water absorbency of lower than 10 mm and each openings have width of 0.05-1 mm, such that the total open area occupies 3-40% of surface area of the top sheet. The edges of the plastic film layer sections defines the openings and is partially fibrillated so as to form a rising portion having maximum height of 1.5 mm. The component fibers of the first fibrous layer has fineness of 0.5-20 dtex and basis weight of 5-60 g/m². The core has a second fibrous layer which is closely contiguous to the lower surface of the first fibrous layer. A third fibrous layer is closely contiguous to the lower surface of the second fibrous layer. The second fibrous layer has Klemm's water absorbency of less than 35 mm but more than Klemm's water absorbency of the top sheet by 15 mm or more. The third fibrous layer has Klemm's water absorbency of at least 35 mm but more than Klemm's water absorbency of second fibrous layer by 15 mm or more.

USE - As disposable diaper, urine absorbent pad or sanitary napkin.

ADVANTAGE - The disposable fluid-absorbent article, has improved dried cloth-like touch and has high liquid-permeability characteristics compared to conventional composite sheet. The napkin allows the top sheet to offer the wearer a dried touch before and after absorption of menstrual discharge without causing a stiffness even though the film layer sections and the rising portion are hydrophobic. The concealing layer (41) of the core functions to conceal menstrual discharge absorbed by the liquid holding layer so that the wearer is relieved of uncomfortable feeling for every disposal of the used napkin. The Klemm's water absorbency is preferably adjusted to increase progressively from the uppermost layer to the lowermost layer. The top sheet with fibrillated portion contributing to a cloth-like touch of article. The article allows body fluids to be rapidly absorbed by the core though the film layer sections of the top sheet, which is hydrophobic or weakly hydrophilic, hence dried touch is obtained.

DESCRIPTION OF DRAWING(S) - The figure shows the perspective view of the disposable body fluid absorbent wearing article.

DE 20117791	U1	4	A01G-001/08	

Abstract (Basic): DE 20117791 U1

NOVELTY - The border segment is made of a u-profile of a rigid synthetic material and can either be straight or curved depending on the area of use. A shallow hollow has to be prepared on the soil surface for the accommodation of the segments, which are inserted with their open side pointing to the top. Bricks, natural stones or any other suitable material can be positioned inside the segments in order to form a shallow wall. The segments can be joined to create various shapes matching the location and depending on the taste of the user.

USE - The u-profile segments can be used as a border for a flower bed or the root area of a tree.

ADVANTAGE - The items are easy to install and offer a wide variety of creative arrangements.

DESCRIPTION OF DRAWING(S) - The drawing shows a top view of a straight segment.

RA=H; optionally substituted, optionally cyclic, heteroaliphatic, aryl or heteroaryl; nitrogen protecting group; carbon protecting group; oxygen protecting group; sulfur protecting group; polymer-carbohydrate; photoaffinity label, or radiolabel;

R2, R3=H; optionally substituted aliphatic, heteroaliphatic, aryl, or heteroaryl; acyl; aroyl; benzoyl; or Si(RB)3;

RB=optionally substituted, optionally cyclic aliphatic, heteroaliphatic, aryl or heteroaryl;

R4, R5=H; or optionally substituted, optionally cyclic aliphatic, heteroaliphatic, aryl, or heteroaryl, optionally substituted by one or more hydroxy, alkoxy, carboxy, carboxaldehyde, alkyl or cyclic acetal, F, NRCRD, N-hydroximino, or N-alkoxyimino;

RC, RD=H, phenyl, benzyl or alkyl;

R6=H; ORA; SRA; NRARA; C(O)ORA; C(O)RA; CONHRA; N3; N2RA; halo; cyclic acetal; optionally substituted, optionally cyclic aliphatic, heteroaliphatic, aryl or heteroaryl; Z=O, N(ORE) or N-NRFRG;

RE, RF, RG=optionally substituted, optionally cyclic aliphatic moiety;

n=0-3.

INDEPENDENT CLAIMS are also included for the following:

(A) a composition comprising (i) a polymeric backbone; and (ii) two or more compounds (I) linked to the polymeric backbone directly or through a linker, and where the compounds (I) are linked through the 12-, 20- or the 21-position of (I);

(B) a dimeric desoxyepothilone of formula (II):

EPO=a compound (I), linked through a functionality present in the 12-, 20-, or 21- position;

X=methylene, C=O or absent;

Y=C=O, O, NH or absent;

Z=C=O, NH, O or absent;

n'=0-10;

(C) a composition comprising (I) optionally in combination with a cytotoxic agent;

(D) preparation of compounds of formula (IIIa), (IIIb), (VIII), (XX), (XXII) and (XXX).

P=oxygen protecting group;

ZB=CO2R9 or COSR9;

R9=H or an oxygen- or sulfur protecting group;

ZA=OR7, NHR8 or N3R8=H, oxygen- or nitrogen-protecting group
ACTIVITY - Cytotoxic.

MECHANISM OF ACTION - Epothilones function through a mechanism involving inhibition of cellular division by stabilization of microtubule assemblies, leading to cell death.

USE - (I) are useful for treating cancer, especially solid tumor, particularly breast cancer (all claimed) and e.g. cervical cancer, colon and rectal cancer, leukemia, lung cancer, melanoma, multiple myeloma, non-Hodgkin's lymphoma; ovarian cancer, pancreatic cancer, prostate cancer, and gastric cancer. Epothilones also have remarkable potency against multiple-drug resistant (MDR) tumor cells. The methods of preparation provide 21-hydroxy analogues of epothilones (which have undiminished biological activity but enhanced aqueous solubility due to the 21-hydroxy group, cf. insoluble paclitaxel), and other useful analogues, particularly analogues of 12,13-desoxyepothilones including analogues functionalized at 20- or 21- position, or aza analogues, and their derivatives.

(I) may be administered in combination with other anticancer agents, or other therapies e.g. surgery or radiotherapy.

ADVANTAGE - The 12,13 epoxymoiety in naturally occurring epothilones contribute to their toxicity toward the host and yet offer little advantage toward their antineoplastic therapeutic effects. As 12,13-desoxyepothilones, (I) have superior therapeutic profile. E.g. 12,13-desoxyepothilone B (dEpoB) has an enhanced therapeutic range compared to the naturally occurring compound, epothilone B, which has a narrow therapeutic index. In vivo experiments based on various mouse models also demonstrated that dEpoB possesses remarkable therapeutic potential and is essentially curative against various sensitive and resistant tumors in xenografts. (I) not only reverse multi-drug resistance in cancer cells, both in vitro and in vivo, but are also active as collateral sensitive agents which are more cytotoxic towards MDR cells than normal cells. (I) are active as synergistic agents, which are more active in combination with other cytotoxic agents, e.g. vinblastin, than the individual drugs would be alone at the same concentration. (I) have exceptionally high specificity as tumor cytotoxic agents in vivo and are more effective and less toxic to normal cells than the principal chemotherapeutics currently in use, including Taxol (RTM), vinblastin, adriamycin and camptothecin.

The methods of preparation enable easy and efficient access to 12,13 deoxy,21-hydroxy analogues of epothilones. The methods provide the necessary acyl and alkyl fragments for macrocyclization in significant quantities representing improved methods compared to prior art processes disclosed in 08986025 and 09257072 (no further detail given).

A comparison of therapeutic effect of dEpoF and 15-azaEpoB against CCRF-CEM xenografts was conducted. Nude mice bearing well established CCRF-CEM tumor xenografts (average tumor size about 400mm³) were treated with 30 mg/kg dEpoB or 6 mg/kg 15-azaEpoB, 6 hours, -i.v. infusion Q2Dx6. Moderate suppression of tumor growth by 15-azaEpoB was observed. However, dEpoF shrank tumor gradually and on day 28, one of three mice was tumor free and the other two mice had only residual tumors. In another assay, dEpoB exhibited an IC₅₀ of 0.0027 microm against human T-cell acute lymphocytic leukemia CCRF-CEM tumor cell line. Comparative value for vinblastine was 0.0063 microm.

DESCRIPTION OF DRAWING(S) - The figure shows the preparation of 12,13-desoxyepothilone F (dEpoF) (Ia).

DE 20104244	U1		19	A47F-005/10	

Abstract (Basic): DE 20104244 U1

NOVELTY - The basic device is made of a rigid material and consists of two rectangular sheets (1,2) with a slot (3,4) leading from the edge (5,6) of one side to the centre of the rectangle. Both parts (1,2) can be joined crosswise by engaging the two slots (3,4). The device can be positioned in two ways, offering different display facilities. A multitude of versions can be created with this method. The parts can have any shape like trapezoidal, triangular et cetera, the parts can be

of different sizes, made of two different materials and with additional parts joined the same way.

USE - The joining method can be used for the creation of a display device.

ADVANTAGE - The simple joining method facilitates the creation of a multitude of individually shaped device for the display of various kinds of items .

DESCRIPTION OF DRAWING(S) - The drawing shows a perspective view of the basic device in the process of being assembled.

CZ 200200951 A3 B01D-011/00 Based on patent WO 200119926

Abstract (Basic): WO 200119926 A2

NOVELTY - Apparatus, comprising a press cake feed system and a twin screw extruder.

DETAILED DESCRIPTION - An apparatus, comprising:

(a) a press cake feed system including a shear component for fluidizing a press cake and a feed component for feeding the fluidized press cake; and

(b) a twin screw extruder connected to the feed component, including:

(i) a first zone with a port that receives the fluidized press cake from the feed component and mixes the fluidized press cake with an organic medium; and

(ii) a second zone downstream of the first zone comprising an outlet for at least partially removing the water phase.

INDEPENDENT CLAIMS are also included for:

(1) a process for continuous flush of a pigment press cake, comprising:

(a) applying shear to the press cake to produce a fluidized press cake;

(b) continuously feeding the fluidized press cake into a twin screw extruder;

(c) mixing the fluidized press cake with a liquid organic medium in the extruder to produce an organic flush phase and a water phase; and

(d) removing at least part of the water phase from the extruder through one or more ports of the extruder;

(2) a process for continuous flush of a pigment press cake, comprising:

(a) fluidizing an aqueous pigment press cake to produce a fluidized pigment press cake;

(b) feeding the fluidized pigment press cake and a hydrophobic organic medium into a first zone of a twin screw extruder having rotating adjacent parallel screws to move the contents of the extruder downstream;

(c) kneading said fluidized pigment press cake and said organic medium between the pair of screws to flush pigment from the water phase into the organic medium;

(d) moving the water phase and pigment flush of the pigment in the organic medium downstream to a second zone in which a majority of the water phase is removed through at least one vent, said second zone including an impediment to downstream movement causing the contents of the extruder to dwell in the separation section for a desired period of time; and

(3) a process of preparing an ink product, comprising:

(a) applying shear to a pigment press cake to produce a fluidized press cake;

(b) continuously feeding fluidized press cake to a twin screw extruder;

(c) mixing the fluidized press cake with a liquid organic medium in the extruder to produce an organic flush phase and a water phase;

(d) removing the water phase from the extruder through one or more ports of the extruder to produce a pigment flush; and

(e) mixing the pigment flush with at least one additional material to produce an ink product.

USE - Pigment flushes for ink compositions.

ADVANTAGE - The invention offers an advantage over previous processes in that it provides continuous processing of conventional press cakes, also provides more control for a continuous flushing process, which results in increased consistency of color and other properties of the pigment dispersion.

DESCRIPTION OF DRAWING(S) - Figure is a schematic diagram of the press cake feed system.

DE 19931306	C2		C04B-035/622	

Abstract (Basic): DE 19931306 A1

NOVELTY - The component (1) is made as an assembly of **several**
ceramic **parts** (2), (and further jointing components (3)). These are
produced by mixing, molding, drying and firing. Assembly employs an
adhesive (11) or a ceramic mass (10).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for the
corresponding kit of parts, used as described.

USE - A ceramic firing aid, e.g. a support, formed as an assembly
of ceramic components, used especially in firing china, electronic
ceramics and ceramic sanitary **ware**.

ADVANTAGE - A particularly open, light frame construction results,
able to travel repeatedly through firings. Use of tubular section
offers a good strength to weight ratio. In comparison with some prior
art, up to 67% weight reduction is achievable. Use of modern materials
offers the potential for even greater weight reduction. The parts can
be stacked to form high frameworks. The jointing components (3) are
hollow filled with ceramic mass, in appropriate implementations.

DESCRIPTION OF DRAWING(S) - A general view of an example frame is
shown. The disclosure also contains detailed cross **sections** of
various types of positively-keying joints.

component (1)

Abstract (Basic): WO 200058896 A2

NOVELTY - A net present bid value is generated using net present value bid information received from bidder, which represents sum of series of payments over contract term segments discounted to present value using preset structure. The net present value bid information enabling bidders to view relative comparison of net present value bids submitted by them, is transmitted to the bidders.

DETAILED DESCRIPTION - The net present value bid information includes multi - segment bidding parameters defining pattern of payments over several contract term segments. The parameters are unit bid, contract length, contract quantity, price value and price reduction value. INDEPENDENT CLAIMS are also included for the following:

- (a) system for conducting electronic online auction;
- (b) method for participating in electronic online auction;
- (c) computer program product

USE - For e.g. conducting business-to-business bidding auctions for industrial purchasers.

ADVANTAGE - Increases competitive dimensions upon which auctions is run by incorporating time value of money into bidding process. Since time value of money is considered, a bidder offering steeper

discounts in early years of multiple year contract look relatively more attractive than **bidder** whose discounts are **offered** in later years. The net present value methodology reduces all possible options over multiple years to one number for comparison purposes.

DESCRIPTION OF DRAWING(S) - The figure shows the calculation of total net present value **bid** using base year **bid** , quantity and annual percentage discounts.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
GB 2339785	A	42	C09D-005/33	

Abstract (Basic): GB 2339785 A

NOVELTY - A retroreflective coating composition comprises, i.e. polyvinyl chloride (PVC) resins, plasticizers, refractive and reflective constituents, and when applied to a substrate and subjected to heat, is converted from a liquid dispersion to a thermoplastic solid **offering** retroreflective properties.

DETAILED DESCRIPTION - A retroreflective coating composition comprises a dispersion of PVC resins, plasticizers, stabilizers, fillers and additives, color pigments, adhesion promoting agents, and refractive and retroreflective constituents. When applied to a substrate and subjected to heat, it is converted from a liquid dispersion to a thermoplastic solid **offering** retroreflective properties.

USE - As a means of increasing night time visibility of pedestrians and road users and as a means of enabling static objects, such as traffic control and hazard warning devices, to be clearly visible to oncoming vehicle drivers during the hours of darkness.

ADVANTAGE - The retroreflective coatings of the invention do not detract from the normal daytime appearance of objects and can be applied by conventional methods without the need for special equipment or facilities. The coatings can be applied to numerous materials and substrates and incorporated into the manufacture of vinyl based products . The formulations have a long term usage life when stored and will remain in liquid form when in printing screens and coating equipment. Retroreflective materials and **articles** can be produced either individually or continuously without the need for equipment cleaning during stoppages of any length of time.

NL 1006523	C2	15	A47F-007/26	

Abstract (Basic): NL 1006523 C2

NOVELTY - A collapsible clothes rack is mounted inside a suitcase.

DETAILED DESCRIPTION - A collapsible clothes rack comprises one or single or multi - section stand parts (8), and a single or multi - section support (23, 24) for hanging the clothes. When assembled the stand and support parts are secured to each other, and when collapsed the rack parts are carried in a suitcase (1), inside which the assembled rack is preferably mounted. INDEPENDENT CLAIMS are also included for (a) a suitcase fitted with the above clothes rack and (b) the assembly and dismantling method for the rack.

USE - The suitcase is used by traveling salesmen for transporting and displaying clothing items in the shop or office.

ADVANTAGE - A lightweight clothes rack can be made using hollow plastic parts and combined with a lightweight plastic suitcase the combined rack/suitcase is more convenient to carry on sales trips. Integrating the rack into the suitcase offers a readily accessible display means for the clothes.

DESCRIPTION OF DRAWING(S) - Figure 2 shows the opened suitcase with the clothes rack assembled.

Suitcase (1)

Bottom side of suitcase (2)

Top side of suitcase (3)

Suitcase side walls (4-7)

Clothes rack base plate (8)

Support tubes (23, 24)

Hinge joint (33)

------------	----	-------------	--

Abstract (Basic): WO 9912093 A1

NOVELTY - Multiplier data is multiplied by multiplicand data to provide a **product**, using a multiplier data parsing circuit to parse the multiplier data on a **group** basis to form a number of **groups**, and to select one of a second set of coefficients for factoring the multiplicand to form a set of factored multiplicands.

DETAILED DESCRIPTION - A **multiplier** has encoders for each **segmented** bit pair of the **multiplier** input data, and which selects one of 4 coefficients, based on the sum of the bit pair, that are then applied to the multiplicand input data to form a number of factored multiplicands. The sum of the factored multiplicands is augmented by two additional bits for all but the last of the factored multiplicands, and by a logic 1 bit. The two additional bits are a logic 1 followed by the inverse of the sign bit of the factored multiplicand, and the logic 1 is in the position occupied by the sign bit of the factored multiplicands which has the least significant bit position of all the sign bits of the factored multiplicands.

USE - Sign extension circuitry for parallel digital multipliers.

ADVANTAGE - Uses small layout on integrated circuit that **offers** fast multiplier operations with low power consumption.

DESCRIPTION OF DRAWING(S) - The drawing shows block diagrams of the adder of the invention.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
DE 19700940	A1	G	4	B65D-001/02	

Abstract (Basic): DE 19700940 A

A plastic vessel, especially in bottle or pot form to contain cosmetic or hair care products, has a mat surface with randomly distributed depressions with impressed irregular outer contours.

Preferably the indentations are spherical in cross-section and of various sizes. The indentation surfaces are coated with a mat paint formed by a polymeric styrene/acrylate dispersion.

USE - A plastic hair-care or cosmetics container.

ADVANTAGE - Uses plastic, benefiting from the associated technical qualities and high functionality, combined with good handling qualities and pleasing appearance; the container appears natural as a result of texturing, rather than plastic, yet remains hygienic with slip-free grip and an impressive appearance achieved from the matt finish. It may be e.g. a blown polyethylene vessel, with further qualities and construction also mentioned.

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
JP 9193921	A		7	B65D-005/50	

Abstract (Basic): JP 9193921 A

The member has a bottom material (10) with a bottom wall (11). A pair of creases (14) are formed in the vicinity of both sides of the bottom wall. A pair of raising walls (12) is installed at both sides of the bottom wall orthogonal to the creases.

A couple of bendable vertical holding member (40) are inserted in the vicinity of the creases. The vertical holding members are installed in such a state to extend over the bottom wall and the respective side

wall. The bottom material is combined with a peripheral wall member (17) which has multiple lead parts (71) to pickup product (R).

ADVANTAGE - Obtains standing up posture of raising wall easily.

Offers packing member of corrugated board at cheap cost.

Based on patent WO 9700766

Abstract (Basic): WO 9700766 A

A ballistic-resistant moulded article contains a compressed stack of monolayers, with each monolayer contg. unidirectionally oriented reinforcing fibres and at most 30 wt.% of a plastic matrix material and

with the fibre direction in each monolayer being rotated w.r.t. the fibre direction in an adjacent monolayer. The density (rho) of the compressed stack is at least 98.0% of the theoretical max. density.

Also claimed is a process for mfg. a ballistic-resistant moulded article, and a ballistic-resistant moulded article with a specific energy absorption (SEA) of at least 75 Jm²/kg on impact of a 7.62mm multiplied by 39 Mild Steel Core P.S. Ball M1943 bullet.

Pref. the density (rho) of the compressed stack is pref. at least 99.0% of the theoretical max. density. The reinforcing fibres in the monolayer have a tensile strength of at least 1.2 Gpa and a tensile modulus of at least 40 Gpa, and are pref. high-drawn fibres of high molecular wt. linear polyethylene. The plastic matrix material is pref. an elastomer with a tensile modulus (at 25deg.C) of at most 41 Mpa. The rotation amounts to 90 deg.. The stack is made from consolidated monolayer packages contg. from 2 to 8 monolayers that are placed cross-wise and are compressed and cooled at a pressure of at least 5 Mpa, pref. 7 Mpa, more pref. 10 MPa. The reinforcing fibres in the monolayers have a cross-section aspect ratio of at most 3. The monolayer is obtained by impregnating the reinforcing fibres with an aq. dispersion contg. the plastic matrix material. The monolayer has a fibre wt. of 50-150 g/m².

USE - As ballistic-resistant moulded articles for use e.g. in helmets, as inserts in bullet-proof vests, as armouring on military vehicles and in ballistic-resistant panels.

ADVANTAGE - The moulded article has an increased specific energy absorption which offers increased protection against impacts of projectiles of various kinds, esp. against bullets, with a low wt. per unit area.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 8058773	A	6	B65D-005/495	

Abstract (Basic): JP 8058773 A

The method involves accommodating a flat board and a plate cushion material in a housing. Several division accommodating spaces formed in a crosswise direction are combined with several diaphragms (10).

A division wall is moulded with a buffer part in the surroundings of an accommodating space. A product is accommodated by accumulating

the flat board and the plate cushion material over the opening of the accommodating space.

ADVANTAGE - Transports product safely and provides excellent buffer ability. Offers easy accommodation work by accommodating product outside housing for packing in accommodation space.

NO 9401027	A			F16L-007/00	

Abstract (Basic): GB 2276694 A

A pipe or cable ducting (10) is formed from two groups of interconnectable semi-tubular plastics sections (12) each group of sections forming approximately one half of the ducting and provided with releasable connectors comprising several circular cross-section bosses 28 and several identically-spaced recesses (30). The recesses (30) are elongated in the longitudinal direction of the elongate section, thereby providing a slight amount of freedom in that direction and increasing the longitudinal flexibility of the ducting.

When two semi-tubular sections (12) are placed with their concave surfaces facing each other, the bosses (28) along one edge of the sections are adapted to be seated in the recesses (30) in the corresponding edge of the other section.

USE/ADVANTAGE- Plastics e.g. polyurethane ducting offering protection against mechanical damage to buried pipes or cables. Convenient to apply and allows subsequent access to the protected items .

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
SU 1157707	A	4		

Abstract (Basic): SU 1157707 A

Improved picture quality and reduced danger of excessive irradiation are the advantages offered by the machine, whose new component is peak detector (17) switched in at the input of the feedback circuit. The peak detector consists of a clamping diode, an RC charging network as a discharge resistor. The time constant of the RC network allows the capacitor to charge, during a fraction of a TV scan field, to a level which represents a preset fraction of a maximum video signal, while the size of the discharge resistor satisfies the condition that the product of its multiplication by the size of the capacitor should be much smaller than a similar product involving the charging resistor.

The new components allow the system automatically to separate the signal produced by the brightest pixel, using a 'floating pseudodominant to stabilise brightness. The pseudodominant need not be tied to any specific part of the image, but can consist of a combination of several brightest sections to give stabilisation on the basis of the brightest pixel of the image every time.

USE/ADVANTAGE - As an x-ray machine with TV display and image brightness stabilisation circuit. The new components, which enable brightness to be stabilised to the level of the brightest pixel (pixels) of the image, as opposed to stabilisation based on average brightness, improve picture quality and reduce excessive exposure to radiation. Abstract (Basic): US 4000349 A

Articles, e.g. automobile parts, are protected with a new plural coated abrasion and corrosion resistant finish by a coating consisting of (A) the article as substrate; (B) an organic base coat film on the surface thereof; (C) a layer of metal on the surface of the base coat film; and (D) a top coat film.

(D) comprises the in situ radiation induced polymerization prod. of soln. contg.: (1) 90-10 pts. of an alpha-beta olefinically unsatd. organic resin contg. 0.5-5 units of olefinic unsatn. per 100 units of mol. wt.; (2) 10-90 &ts. of vinyl solvent monomers polymerizable with the resin und under ionizing radiation, ≥ 10 wt.% of the vinyl monomer being selected from divinyl monomers, trivinyl monomers, tetravinyl monomers adn mixts. thereof; and (3) 0.05-0.6 pts. per 100 pts. total of resin and monomers of a mono or diester of phosphoric acid of formula: where $n=1$ or 2 , $R=H$, Cl or CH_3 , $A=C_nH_{2n}$ in which $n=2-6$ and $R_1=H$, $1-4$ C chloro- or bromoalkyl or $1-4$ C alkyl.

Suitable for use as a substitute for plated metal surfaces used for trim or bright work on automobile exteriors. It offers improved corrosion resistance and adhesion especially on surfaces bearing vapour deposited metal coatings. Prefd. resins are for example polymers derived from vinyl monomers, e.g. acrylic acid.

JP 9279205	A	8	B22F-003/02	

Abstract (Basic): JP 9279205 A

The method involves filling a powder (P) inside a rubber moulding (10) attached to a die (7) to form a green compact (C). The powder inside the rubber moulding is then compressed between punches (8,16) to mould the green compact.

When the compressive force is released, the gas generated due to heating of powder to a predetermined temperature, is released.

USE/ADVANTAGE - For moulding machine parts, motor vehicle components, household electrical appliances, various tools containing CBN powder. Offers products with high chemical, electrical and magnetic characteristics. Removes generated gas rapidly.

ABSTRACT

PROBLEM TO BE SOLVED: To conduct sale and production to order, under protection of consumer privacy.

SOLUTION: An Web page providing part 11 of a sales control center 10 provides to a consumer a member registration page provided with a column for inputting a name and a belonging group name, and a distributor assigning page on which a member selects a distributor 30 for own product. An order-reception and ordering processing part 13 totalizes the number of lots of product purchase offers input on a purchase applier page provided by a member group in every group, instructs a maker 20 to start production of a product at a point of time when a totalized value in the every group reaches an order reception lot, and informs the distributor 30 and the maker 20 of a name of a product purchase applier and the distributor. The maker 20 is able to conduct the production to order thereby since the maker 20 starts the production based thereon. The distributor 30 is a service company intimate with a local area such as a newspaper distributor, the member is not required to inform the control center 10 of own card number and the like, and the privacy is protected thereby.

ABSTRACT

PROBLEM TO BE SOLVED: To provide an on-line auction system capable of coping with various dealing conditions such as payment to bank, credit card and debit card, besides cash transactions, and enlarging the dealing to equally provide the benefit to both of a seller and a buyer while keeping the balance between demand and supply.

SOLUTION: The seller registers an exhibit or makes a bid for the exhibit from a terminal 3 to a WEB server 2 of a mediator connected to the Internet network 1, and the buyer registers desired goods or makes a bid for purchase. With respect to a successful bid for goods, the selective successful bid opportunities are given under the consideration of the

dealing conditions and a condition of goods, besides the price, which increases the possibility of the successful bid for the goods to the seller, allows the buyer to easily get the desired goods, and totally activates the auction system.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a means which supports bidders who have value standards for articles of different markets.

SOLUTION: The automatic bidden article determination system 12 inputs a desirable article relational expression 2 in which desirable articles of bidders and their mutual relation are described, an article value table 3 containing the article values of respective articles or article groups, total purchase funds 4 representing maximum funds for purchasing, current value information 5 on the respective articles, and strategy 1 for article purchasing from an input device 100. A desirable purchased article combination calculation device 9 is equipped with a profit calculating device 6 which calculates the total profit when one or more arbitrary desirable purchased articles included in the desirable article relational expression 2 are purchased according to the article value table 3 and price information 5, and a strategy calculating device 7 which outputs a list 11 of purchased articles to be bidden to maximize the profit within the range of the total purchase funds 4 and the total profit 10 at the time while properly calculating the total profit by using the profit calculating device 6 as to a candidate for a combination of the articles to be bidden according to strategy 1.

ABSTRACT

PURPOSE: To dissolve congestion occurring at a cash register in a store due to the shortage of store clerks, etc., and to improve the working ratio of the store facilities by making the customers substitute for operation of the register.

CONSTITUTION: A customer picks up the commodities out of a commodity shelf 12 via an entrance 13 and offers a shopping basket containing the commodities to a weight measuring device 3 which is operated by a store clerk. Then the clerk weighs the shopping basket with use of a weighing machine 2 for measurement and input of the weight of commodities. Then the clerk confirms the number of commodities and inputs the due information via a keyboard 1. The customer moves toward an arrow in a monitoring section set by a partitioning part 11 and puts the basket on a reweighing device 5 of an idle register. Thus the weight of the commodities is automatically measured and this measurement information is compared with the stored comparison information on the weight. When the matching is confirmed between both information, an entrance door 8 of a register box is opened. Thus the customer can operate the cash register.

ABSTRACT

PURPOSE: To realize a delicate information offer by expressing knowledge in a knowledge base by a rule and a membership function, executing a forward inference and a fuzzy inference, based thereon and generating offer information, and outputting it.

CONSTITUTION: A storage device 5 is constituted of a guide item rule group storage device 51, a phrase attribute rule group storage device 52, a fixed phrase rule group storage device 53, and a variable phrase rule group storage device 54. An information service device 3 is provided with a forward inference device 31 and a fuzzy inference device 32, brings a system state and a control state to fuzzy inference by using a guide item rule group, selects an appropriate guide item, and executes a forward inference by using a phrase attribute rule group corresponding to its guide item. In such a way, in accordance with a state, a determination for whether an information offer is executed or not, a selection for whether words and phrases are added or not, a change of a word order of an information offer sentence, and a definition of a membership function for allowing a proposition to have a meaning can be executed, therefore, it

becomes possible to cope softly with a state.

Abstract (Basic): US 6466919 B1

NOVELTY - Individual conditional purchaser offer and payment
identifier are received from customers. The received conditional
purchase offers are combined and compared with aggregation rules of a
seller, to determine whether a seller is willing to accept the
aggregated purchase offer if customer-defined conditions satisfy
seller-defined restrictions. Based on the acceptance, the purchase of
goods is potentiated.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for system
for processing sale of goods or service.

USE - For processing sale of goods and service.

ADVANTAGE - Provides individual with associated group discounts and
other benefits.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
aggregate conditional purchase offer management system.

Abstract (Basic): US 6418415 B1

NOVELTY - An individual conditional purchase offer (CPO), is
obtained from each of the customers. The individual CPOs are combined
to form an aggregate purchase offer and are transmitted to the
sellers (400). The customers (410) are binded by a CPO management
system (100) for purchasing the goods, when an acceptance of
aggregate purchase offer is received from the sellers.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for goods
sale processing system.

USE - For processing goods sale and services such as travel or
insurance services.

ADVANTAGE - As the goods are purchased on the basis of the CPOs,
cost savings are achieved. The CPO management system processes CPOs on
behalf of groups of the buyers thereby providing individuals with group
discounts and other benefits associated with purchasing.

DESCRIPTION OF DRAWING(S) - The figure shows the schematic block
diagram illustrating the aggregate conditional purchase offer
management system.

Abstract (Basic): KR 2002016224 A

NOVELTY - A method and device for purchasing products in an electronic shopping mall are provided to build a Vertical portal site with a reputation in a certain professional field by providing information on any products requested by the buyer and actualizing all of the purchasing process.

DETAILED DESCRIPTION - The system comprises of one or more buyer interface, one or more marketer interface and a product purchase server. The product purchase server comprises of a number of modules forming the detailed functions of the server, a database(280) supporting the modules and a CPU(260) executing the modules, and the CPU(260) connects to the buyer interface and the marketer interface through a network interface(270). The modules comprises of a user module(210), a search module(215), a stock- purchasing module(220), an offer sale module(225), a custom-ordered product module(230), and a purchase request module(235). The custom-ordered product module comprises of an application unit for each product group, an ordering term establishing unit and a purchase history log. The purchase request module comprises of a purchase wish-list product log and a wish-list term establishing unit.

KR 2002005546 A 1 G06F-017/60

Abstract (Basic): KR 2002005546 A

NOVELTY - A method for group buying with lowest prices according to points is provided so that bid participants can be thrilled by difference of a purchasing price, by enabling the earliest bid participant to purchase a group buying product in a minimum price and the latest bid participant to purchase the group buying product in a maximum price.

DETAILED DESCRIPTION - A purchaser becomes a member of a group buying service company by inputting personal information(S10). After the member registration procedure, the member reads group buying information in a group buying information screen by inputting a domain of the group buying service company through a personal computer(S11), and clicks a group buying bid participation button(S12). The group

buying service company confirms whether the member participates in a group buying bid, and temporarily holds maximum price points from a member account(S14). Thereafter, the group buying service company makes a bid list and secretly decides a contract price according to the maximum price point bidding order(S15)(S16). After the group buying closing date, the contract price is displayed on the web site screen of the group buying service company, or transmitted to E-mail addresses of the members(S17).

Abstract (Basic): US 20020038281 A1

NOVELTY - Identification and purchase condition data are collected from multiple purchasers through Internet, to define two groups of purchasers. Based on a common purchase condition data of each group, conditions under which the product is offered for sale is generated. Information including the conditions is forwarded to each purchaser.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Product offering system;
- (b) Computer program

USE - For offering a product for sale e.g. insurance like house insurance, vehicle insurance, accident insurance, residence insurance, motor cycle insurance, travel insurance, boat insurance, energy products such as heating oil, gasoline, telephone, bank products or services such as loan products using Internet.

ADVANTAGE - Purchaser obtains price reduction easily by placing a request for a product offer in a group. Allows the offer for the product to be dependent on certain information such as living area or age of the purchasers.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic view of the relationship between various entities involved in the product offering method.

JP 2002007903	A	23	G06F-017/60	

Abstract (Basic): JP 2002007903 A

NOVELTY - Information relating to a user purchasing discounted goods, is managed in a management unit (006). When the discounted goods satisfy predetermined conditions, goods are sold to the user at a discount price.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for group discount offering system.

USE - For offering group discount for goods purchased through internet.

ADVANTAGE - Goods purchase is done effectively and at reduced cost.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the group discount offering system. (Drawing includes non-English language text).

Management unit (006)

Abstract (Basic): KR 2001100529 A

NOVELTY - A compensation method according to the purchase volume on the internet shopping mall is provided to offers a specific bonus as much as the total purchase volume of a user to the user.

DETAILED DESCRIPTION - The user accesses a shopping mall web site(S211) and selects a specific product(S212). The web site detects the group purchasing information from a product information DB and offers the group purchasing information to the user(S213). The

user sees the group purchasing information and decides the purchase of the product(S214). When the user tries to purchase the product, the web site offers an order and payment screen to the user, who pays the cost for the product(S215). If the user wants to purchase the other product, the user can select the other product(S216). The web site gives the user the bonus responding to the total purchase volume(S217).

KR 2001095929	A		1 G06F-017/60	

Abstract (Basic): KR 2001095929 A

NOVELTY - An Internet opened bid -type group buying method is provided to realize a trade with high convenience and transparency by automatically processing a group buying object commodity select, an invitation of buying applicant, a seller bidding process, and a final order process through a commercial site.

DETAILED DESCRIPTION - A buyer connects to an electronic site(201) and suggests a new group buying about a specific commodity(202). If the new group buying is suggested, a web page which collects information about the commodity such as a title, picture, product, details, group buying information, and an applicant list, is prepared(203) and notifies the contents to members through an electronic mail(204). The buyers connecting to the electronic site obtain detail information from the site, apply to participate in the group buying, if the buyers interest in the corresponding group buying(205). If the buyer number is increased, the site operator notifies the increased buyer number(206). At a bid opening day(207), the operator immediately notifies the group buying commodity information and information related to the bid(208) and begins the bid about the group buying commodity as a seller of enterprise member(209). The operator, immediately on the bid generation about the group buying commodity, additionally records a bid enterprise, bid price and necessary information to a page for indicating the group buying information(210).

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
KR 2001095466	A	1	G06F-017/60	

Abstract (Basic): KR 2001095466 A

NOVELTY - A method for operating an Internet auction site is provided to offer a rapid auction/reverse auction by operating the auction/reverse auction site using an integrating message service and order information.

DETAILED DESCRIPTION - A person bid(200) presents storage in warehouse, sale, a minimum price of goods to sell through an auction/reverse auction site(100). A bidder (300) bids in order to purchase necessary goods by a desired price from the auction/reverse auction site(100). In case that the goods warehoused by the person bid(200) is knocked down to the bidder(300), a financial institution(400) executes a price settlement for the corresponding bidder(300) and charges it to the corresponding bidder(300). A delivery company(500) ships the goods from the person bid(200) according to a delivery request of the auction/reverse auction site(100), delivers it to the bid bidder(300), and notifies information about it to the auction/reverse auction site(100). A database(110) is included in the auction/reverse auction site(100) and provides a catalog of goods that the bidder compounds a portfolio in order to tender a bid and information related to the auction/reverse auction to the corresponding bidder through an integration messaging service.

AU 200176004 A G06F-017/60 Based on patent WO 200208999

Abstract (Basic): US 20020013758 A1

NOVELTY - A combination of commodities that are generally used by the customers are identified. A price value is set for each combination such that the value is lower than the market cost of the individual commodities. A website is established at which the combination of commodities are offered for sale with the set price value without quoting the price for individual commodity.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Commodities buying method;
- (b) Commodities buying and selling method;
- (c) Commodities selling system

USE - For selling commodities such as industrial minerals, metals, paper and pulp, rubber, chemicals, petrochemicals etc, through Internet.

ADVANTAGE - Since the commodities are sold in a combination at a lower cost, the commodities which are not sold in ordinary conditions are also sold efficiently by lowering the overall price. Also the consumer can buy the commodities at a lower price than the market price.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of commodity selling method.

JP 2001312622 A 15 G06F-017/60

Abstract (Basic): US 20010039531 A1

NOVELTY - The user terminals (20,30) specify a single item or a combination of items, from grouped items in the auction, for bidding. An auction server (10) decides on successful bidders, for bids made on a variety of combination of items, from user terminals (20,30), such that the bidding items do not overlap to multiple bidders.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) Auction server;
- (b) User terminal;
- (c) Auction method;
- (d) Bidding method;
- (e) Storage medium storing program for executing auction method;
- (f) Program transmission apparatus

USE - For providing auction service through communication network such as Internet in e-commerce applications.

ADVANTAGE - Allows a buyer to participate in the auction such that the auction is hypothetically conductor in relation to any combination of bidding items as the selected bidding items do not overlap to multiple bidders. The items subject to auction are dynamically changed depending on the requests of seller and bids from buyers, leading to flexible trade.

DESCRIPTION OF DRAWING(S) - The figure shows the configuration of an auction server machine.

AU 200136836 A G06F-017/60 Based on patent WO 200159668

Abstract (Basic): WO 200159668 A1

NOVELTY - The method involves identifying each possible combination of channel values and item values for a set of items. The set is associated with one or more channel variables, each channel variable having several channel values. The set is also associated with several item variables, each item variable has several item values. A statistically determined expected cost is compared with a processor to a statistically determined expected benefit of each possible combination to determine an optimal combination. A specific item is offered for sale on a channel having the channel values of the optimal combination.

The set of items is identified. The set of items is associated with the one or more channel variables. The set of items are associated with the one or more item variables

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a computer-readable medium storing instructions for activities, for an appts. for selecting variables to identify an item, for a method for providing a description of an item, for an appts. for providing a description of an item, for a method for providing a description of a returned item, for a method for managing reverse logistics for items and for a method for re-selling previously purchased goods.

USE - For selecting a sales channel.

ADVANTAGE - Better returns management allows initial prices to consumer to be cheaper and ensures that fewer items end up as waste in landfill sites.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart of the method.

DK 9901135 A G07F-007/10

Abstract (Basic): WO 200115025 A1

NOVELTY - Merchants are coupled to common server that issues and maintains credit card balance of individual user. When user selects goods to purchase through Internet, relative user card identification is sent to server. The server compares user credit balance with selected goods total price. If total price is less, user verification is sent to user, merchant and required amount is detected from card balance.

DETAILED DESCRIPTION - The merchants offering goods for sale, via Internet are connected to the common server. The server maintains goods information of server and credit card balance information of individuals who possess scratch of card issued from server side. During purchase, when user selects the goods to be purchased from the list of goods displayed in web site of particular merchant, the user card identification is sent to merchant. The total price of goods along with user card identification data is sent to server from merchant or user. The server compares credit card balance with goods total price. If total price is less, verification is sent to merchant and user web site, otherwise the notification is sent to user so that he uses one more credit card.

USE - For settlement of payment using credit card during purchase of goods, tickets, hotel booking, book making, lotteries, on-line arcade game, through Internet.

ADVANTAGE - Since the user card verification results are sent to user and merchant, the user is ensured about economic losses and current credit card balance. The transaction between user and merchant is performed, without revealing the actual identity of user, hence creditor anonymity is maintained safe. Need for special software is not required, as a result transaction is enabled in Internet cafe even using AP mobile phone with Internet access. The transaction for very minor economic value is also performed efficiently.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of payment transaction during goods purchase.

Abstract (Basic): WO 200102829 A2

NOVELTY - The method involves characterizing the aroma of the consumer product of a finished state, such that the consumer product is offered for sale to a consumer in an unfinished state. The aroma of the consumer product is synthesized in response to the determine characteristics of the product aroma. The synthesized aroma is combined with the consumer product.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) an aroma sampling apparatus;

(b) and a product state determination method.

USE - For sampling of aroma of a finished consumer product.

ADVANTAGE - Enables determining whether the consumer product is aged or transformed into a state wherein product is no longer suitable for use. Enables vendor to employ additional sensual modalities e.g sense of smell in offering products for sale, thus allowing consumer to make better informed purchasing decision.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart for sampling aroma of finished consumer product.

AU 9676636 A

Based on patent WO 9716797

Abstract (Basic): WO 9716797 A

The system comprises a processor programmed to perform predetermined tasks, and one or more databases with stored specific offers related to specific product configurations. The system is coupled to an electronic data communications network such as a wide area network. The database has product model data, price inquiry data (34A), special request data and accepted offers data (34C) stored in it.

The database comprises several databases, each having one particular type of data stored in it. The system is coupled via a communication network to a buyer computer. The processor is programmed to, on the receipt of a predetermined command from the buyer computer, upload product configuration data and price data from the database, which is displayed at the buyer computer.

USE - Relates to product purchase systems and to such systems accessible via communications network which facilitates purchase of products.

ADVANTAGE - Simplifies and reduces time required, for both buyer and seller, in completing product sales transaction. Enables potential purchasers to quickly and easily ascertain offers for sale of products in particular geographic region of interest, and to review all specific product configurations of interest in combination with final pricing information for products in same region.

Patent No Kind Lan Pg Main IPC Filing Notes

JP 8161640 A 7 G07G-001/12

Abstract (Basic): JP 8161640 A

The appts. has a goods combination table memory (n12) that registers and records a goods recognition code. A second bit sequence prodn. unit produces a second bit sequence for setting the corresp. bit of the numerical character shown at the predetermined unit of the goods recognition code.

A bit sequence decision unit determines if the logical product of the first bit sequence and second bit sequence is equal to the first bit sequence for every goods combination record. A combination check unit checks if the bit sequence is stored in the goods recognition code memory. An account settlement unit performs the processing of the account, provides for processing of discount and offer transaction for shopping account holders.

ADVANTAGE - Reduces need for checking of goods recognition code. Reduces time for account settlement thus improving customer service.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
JP 7302287	A	5	G06F-019/00	

Abstract (Basic): JP 7302287 A

The system has an input device which enters a purchase and an auctioned lot from a personal purchase terminal (2). A data memory device (1b) stores several accumulation transaction data and a successful bid price. A purchase candidate total and a prospective purchase total to the auction object merchandise are computed from the input unit.

An operating device operates an auction start price and an auction price variation range which are suitable from a memory data of the data memory device. An auction is able to proceed by an auction start price setting device (1d) and an auction price variation range setting device (1e) setting up the auction start price and the auction price variation respectively using the same operation.

ADVANTAGE - Provides smooth and efficient auction operation by setting up auction start price and auction price variation width using same operation. Shortens time from auction start to successful bid.

Abstract (Basic): WO 200067191 A2

NOVELTY - At least one hierarchy having one or more levels is defined for one or more goods and/or services. One or more options for one or more goods and/or services are offered for sale at different levels of hierarchy. Demand is predicted for one or more goods and/or services from one or more purchases of options.

DETAILED DESCRIPTION - Higher and lower levels correspond to abstract and detailed descriptions of goods and/or services, respectively. Levels of the hierarchy comprises one or more members of the group consisting of species, genus, family, class, order and phylum or local, state, regional, national, continental and global regions, or minutes, hours, days, weeks, months and years. The goods comprise one or more members of the group consisting of commodities, consumer products and financial instruments. The services comprise one or more members of the group consisting of financial services, transportation and delivery services, and household services.

INDEPENDENT CLAIMS are also included for the following:

(a) system for predicting demand for one or more goods and/or services;

(b) computer executable software code stored on computer readable medium;

(c) programmed computer system

USE - For predicting future demand for goods and/or services in consumer product company, electronic market.

ADVANTAGE - Utilizes a variety of data mining techniques to analyze the resulting price series of single and multiple futures and options over SKUs at different levels of SKU, regional and temporal hierarchy in order to obtain improved demand forecasting. Creation of futures and options trading system for a wide range of goods and services affords a mechanism which endogenously helps to smoothen and autoregulate the supply chain.

DESCRIPTION OF DRAWING(S) - The figure shows the method of predicting demand for one or more goods and/or services.

FILED: March 07, 2000 (20000307)
INTL CLASS: A45B-025/10; A45B-025/28

ABSTRACT

PROBLEM TO BE SOLVED: To solve important problems in usage such that although an umbrella equipped with a gutter section which is constituted to open into a U-shape or a V-shape is conventionally offered in order to prevent a baggage or an apparel from being wetted with raindrops dropping from the peripheral edge section of the umbrella or with rain water splashing from the ground at the time of a heavy rain, or prevent the user from being splashed with raindrops by other people in a crowded place, the gutter section of the conventionally offered umbrella having the gutter is affected by the strong wind and rain at the time of a strong wind and rain, and the tip rib for the gutter or the main rib may be broken, or the gutter section is totally filled with snow at the time of a snowfall.

SOLUTION: An umbrella frame structural body is constituted by providing tip ribs for a gutter under a configuration wherein the tip ribs at respective tip ends of respective main ribs in the umbrella are folded back in the direction to the ferrule. Then, an umbrella fabric extended section, which is stretched on the front surface side of the main ribs, is stretched to the tip ribs for the gutter. Thus, the annular gutter, wherein the dimension of the umbrella fabric to the front surface may become smaller on the flow-in port side of the gutter than the depth side of the gutter, is formed on the peripheral edge section of the umbrella.

ABSTRACT

PROBLEM TO BE SOLVED: To automatically send information on the merchandise or service required by each user to each user when the user requires the information.

SOLUTION: A mining means 26 files the user information in a DB 18 by grouping the information, based on a specific parameter. Since the next

action of a user can be foreseen by classifying the action pattern of the user in detail and profile information can be mailed to the user by means of a mailing means 25, the effective mail which is directly linked with the next merchandise sale or service offer and contains the most suitable content to the user can be sent to the user. Therefore, the hit ratio of the user for purchasing a merchandise or utilizing service can be improved remarkably.

Abstract (Basic): DE 20018130 U1

NOVELTY - The stand consists of a basic element (1) and three legs (2), made of carbon fiber. The circular shaped basic element has a central opening for joining the carrying elements of the fluid containing infusion bag and the spring balance.

DETAILED DESCRIPTION - Each of the three legs is assembled from three individual segments, joined with cylindrical cases and inserted with its upper end into a cylindrical case, located at the lower side of the basic element. When assembled, the legs are slightly tilted, in order to offer maximum stability.

USE - The device can be used at home, in an hotel or even when camping by a person, dependent on home dialysis.

ADVANTAGE - The device can be used at home, in an hotel or even when camping by a person, dependent on home dialysis.

DESCRIPTION OF DRAWING(S) - The drawing shows a perspective view of the device.

GB 2204535	A	18		

Abstract (Basic): GB 2204535 A

A ship has, fixed in directions athwartships w.r.t. the decks, and vertically w.r.t. transverse bulkhead and/or other transverse partitioning wall structures of the vessel, a number of elements. Each element offers purchase for hand and foot.

The elements are distributed throughout the vessel and the vessel is so constructed that the elements severally, or #####collectively in serially ordered groups constitute, or constitute segments of, a number of routes through the vessel to the exterior in directions parallel to the planes of the decks, or of the bulkheads and/or other partitioning walls as the case may be. By way of the routes should the vessel keel over to a side stranded or to a capsized position, escape may be sought from various locations of the vessel by climbing hand over hand, foot over foot, from element to element along at least one of the series of elements.

USE - To allow escape from a capsized ship.

Abstract (Basic): US 6397197 B1

NOVELTY - A vendor requirement data is calculated from the buyer's invitation for bid data and compared with stored vendor record to qualify vendors. An invitation for bid is transmitted to the qualified vendors. The bids are obtained from the vendors and compared. The lowest bid price and the corresponding vendor are selected and an order is transmitted to the selected vendor.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for competitive bidding system.

USE - For subscribing buyers for purchased of print and other customized information, product goods and services such as business cards, forms, note pads, envelopes, other packaging, labels, pamphlets, CDROMs, transparencies, brochures and bound books, flyers, stickers, etc.

ADVANTAGE - Maintains multiple vendor pools corresponding to several print product or service types. Automatically generates a set of project milestone data for use in monitoring the winning vendor's progress on the buyer's requested print job or service. The buyer is made independent of individual print vendors and is able to obtain competitive pricing based on objective specifications that reflect the buyer's requirements. Provides services at low prices from selected quality vendors. Focuses on budget planning, job preparation, internal customer service needs, production quality and compliance.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart of the method of obtaining lowest bid from information vendors.

pp; 12 DwgNo 4/4

INTERNATIONAL PATENT CLASS: G06F-017/60

...ABSTRACT A1

A system and method for **grouping** and selling **products** or services
using a computer system, potentially connected to a network. The computer
system includes...

...presents a back end interface on some terminals, which can be used to
enter new **products**, services and **groupings** of **products** and/or
services to be **offered** for **sale** on the sales interface. Descriptions
of the products or service offerings are entered into the...

...reviewed and approved or selected by human operators using the back end
interface before being **offered** for **sale** on the sales interface. One
non-limiting advantageous application is the dynamic packaging of
perishable...

...SPECIFICATION packages for sale. In more detail, the present invention
provides a system and method for **grouping** and selling **products** or
services using a computer system, potentially connected to a network such
as the decentralized...

...presents a back end interface on some terminals, which can be used to
enter new **products**, services and **groupings** of **products** and/or
services to be **offered** for **sale** on the sales interface.

Descriptions of the products or service offerings are entered into the

Detailed Description

Detailed Description

... need not bid on every product in the pool formed by the one or more
buyers participating or bid on every item in the lot of each buyer .
Rather, a vendor bids on what that vendor wishes to supply. However, in
a system where each buyer must...

...products offered by the different Vendors. a product hierarchy can be
used. In such a hierarchy , different product categories are defined
to group specific products according to some relationship.

In one embodiment of such a hierarchy, each Vendor...of flashlights and
batteries for those flashlights. The buyer may get involved in a single
product type pool for the flashlights and enter the batteries as a
disposable (see above). In this case, the batteries are a condition on
the bid , - but the buyer is not agreeing to purchase the batteries.
Instead, the

Detailed Description

Detailed Description

... particular demands of the merchant data source interface.

Providing offering navigation (step 440) allows specific offerings
and/or purchase data to be located for each source (step 450). In one
embodiment the shopping aggregator accesses search engines provided by
one or more sources or third party systems for locating offering and/or
purchase data (step 456). For example, the shopping aggregator may
navigate a source Web site and...

...a search engine may be supplemented or replaced by any method of
identifying a desired product, such as hierarchical product
categories, merchant-specific or aggregate catalogue-style
browsing, or any other method or combination of methods
Retrieving data (step 460) provides offering, purchase, and
transaction data to the shopping aggregator from source and system data
sources. Data retrieval...

...occur periodically from merchant systems in order to maintain a system
database of relatively stable offering data and purchase data. For
example, basic product information may be queried periodically to update
a product database...

Detailed Description

Claims

Detailed Description

... is discussed below in conjunction with Figures 45 through 57. Figure 45 shows a conditional purchase offer (CPO) management system for receiving and processing CPOs from one or more buyers, utilizing buyer interfaces 4800, for packages of component goods or services. In one embodiment, the package CPO management system 4500 deconstructs or breaks up an overall package CPO into component CPOs which are individually offered to sellers.

The package CPO management package of component goods or services or both, such as air travel, hotel and car rental, at a buyer...

Claim

... for said purchase offer.

82 A system for processing the sale of a package of **component items** comprising:
a communications port to receive a purchase offer for said package from a...to said customer.

94 A method of processing the sale of a package of **component items** , comprising the steps of:

163

I

obtaining a purchase offer for said package from a customer, said purchase offer containing a description of each **component item** and a payment identifier for specifying a general-purpose account from which funds may be...

...said component purchase offers.

95 A method of processing the sale of a package of **component items** , comprising the steps of:

obtaining a purchase offer for said package from a customer, said purchase offer containing at least one customer-defined condition for each of said

component items ;

deconstructing said package purchase offer into a plurality of component purchase offers;

identifying one or more rules from a plurality of sellers of ' said

component items , each of said rules containing one or more

seller-defined restrictions;

and

comparing one or...

...seller-defined restrictions of at

least one of said rules; and

providing said package of **component items** to said customer if an acceptance is obtained for each of said component **purchase offers** .

96 A system for processing long distance calls comprising:

a communications port for obtaining a...

Detailed Description
Claims

Detailed Description

... the price adjustments for other product groups that are above the particular product in the **product groups hierarchy**. The invention sorts the various pricing adjustments applicable to a particular product offered to a particular **purchasing** organization based on several criteria.

After the sorting is accomplished the pricing adjustments are applied...

...price at which a particular product can be sold to a particular purchasing organization.

The **combination** of organizational **groups** and **product groups hierarchies** and the denormalized pricing table relating a particular organization (or an entire organizational group) to...

...store, maintain, and retrieve huge amounts of data required to determine prices for various products offered to various **purchasing** organizations while applying a large number of price adjustments. The invention also overcomes the disadvantages...

Claim

1 A method for determining price of a product offered to a **purchasing** organization, the method comprising the steps of:
arranging a hierarchy of organizational **groups** ;
arranging a **hierarchy** of **product groups** ;
identifying at least one organizational group above said purchasing organization in said hierarchy of organizational groups;
identifying at least one product **group** above said **product** in said **hierarchy** of **product groups** ;
retrieving pricing adjustments corresponding to said product, purchasing organization, at least one organizational group, and...

...shipping charges, and tax pricing types.

11 An apparatus for determining price of a product offered to a **purchasing** organization, the apparatus comprising:
means for displaying a hierarchy of organizational groups;
means for identifying at least one organizational group above said purchasing organization in said hierarchy of said organizational **groups** ;
means for displaying a **hierarchy** of **product groups** ;
means for identifying at least one product **group** above said **product** in said **hierarchy** of **product groups** ;
means for retrieving pricing adjustments corresponding to said product, purchasing organization, at least one organizational...usable medium having computer readable program code embodied therein for determining price of a product offered to a **purchasing** organization, said computer readable program code in said article of manufacture comprising:
computer readable program...

...said organizational groups;
computer readable program code configured to cause a computer to display a **hierarchy** of **product groups** ;
computer readable program code configured to cause a computer to identify at least one product **group** above said **product** in said **hierarchy** of **product groups** ;
computer readable program code configured to cause a computer to retrieve pricing adjustments corresponding to...

METHOD AND APPARATUS FOR RECEIVING AND RESPONDING TO CUSTOMER REQUESTS FOR
INFORMATION

PROCEDE ET APPAREIL PERMETTANT DE RECEVOIR DES DEMANDES D'INFORMATIONS DE
CLIENTS ET D'Y REPONDRE

Priority Application: US 99153609 19990913; US 2000532766 20000322

14/TI,PR/31 (Item 30 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

SYSTEM FOR PROVIDING A COMPARABLE BRANDED PRODUCT BASED ON A CURRENT
BRANDED PRODUCT

SYSTEME POUR FOURNIR PRODUIT DE MARQUE COMPARABLE SUR LA BASE D'UN PRODUIT
DE MARQUE COURANTE

Priority Application: US 99393228 19990909

14/TI,PR/32 (Item 31 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

ELECTRONIC COMMODITY EXCHANGE SYSTEM HAVING DYNAMIC TRANSACTION FILTERS
SYSTEME DE BOURSE DE COMMERCE ELECTRONIQUE COMPRENANT DES FILTRES DE
TRANSACTION DYNAMIQUE

Priority Application: US 99152784 19990907

14/TI,PR/33 (Item 32 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

SYSTEM AND METHOD FOR ELECTRONIC COMMERCE
SYSTEME ET PROCEDE DE COMMERCE ELECTRONIQUE

Priority Application: KR 9937752 19990906; KR 200044697 20000801

14/TI,PR/34 (Item 33 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

A COMPUTER BASED FRACTIONAL AUCTIONING SYSTEM
SYSTEME DE VENTE AUX ENCHERES INFORMATIQUE PAR FRACTIONS

Priority Application: US 99386271 19990831; US 2000498389 20000203

14/TI,PR/35 (Item 34 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

SUPPLEMENTAL OFFERS WHEREIN A BUYER TAKES POSSESSION AT A RETAILER OF A
PRIMARY PRODUCT PURCHASED THROUGH A PURCHASING SYSTEM

OFFRES SUPPLEMENTAIRES PERMETTANT A UN ACHETEUR DE PRENDRE POSSESSION CHEZ
UN DETAILLANT D'UN PRODUIT PRIMAIRE AU MOYEN D'UN SYSTEME D'ACHAT

Priority Application: US 99370291 19990809

14/TI,PR/36 (Item 35 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

SYSTEM AND METHOD FOR EXTENSION OF GROUP BUYING THROUGHOUT THE INTERNET
SYSTEME ET PROCEDE D'EXTENSION DU REGIME D'ACHATS GROUPES DANS INTERNET

Priority Application: US 99142471 19990706; US 99409237 19990930

14/TI,PR/37 (Item 36 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

METHOD AND APPARATUS FOR COMPARING, RANKING AND SELECTING DATA ITEMS
INCLUDING WEB PAGES
PROCEDE ET SYSTEME POUR COMPARER, CLASSER ET CHOISIR DES ELEMENT DE DONNEES
COMPRENANT DES PAGES WEB
Priority Application: US 99142342 19990702

14/TI,PR/38 (Item 37 from file: 349)
DIALOG(R)File 349:(c) 2003 WIPO/Univentio. All rts. reserv.

WEB-BASED INFOMEDIARY FOR INTELLECTUAL PROPERTY TRANSFER
INFOMEDIAIRE WEB DESTINE AU TRANSFERT DE DROITS DE PROPRIETE INTELLECTUELLE
Priority Application: US 99346063 19990701; US 99346064 19990701

... embodiment of the present invention. A web enabled enterprise
structure includes a finance and administration component 1702, a
product sales infrastructure 1704, and an Internet technology
infrastructure 1706. The second element of the business...

...auction of operation 2010 of Figure 20.

In operation 2102, a current price for the purchase offer is
displayed and the price of the purchase offer is decreased as the
time remaining in the auction decreases. The purchase offer is
preferably divisible to allow several suppliers to accept portions of the
offer and supply only the quantity or type of goods or services
pertinent to that portion. In operation 2104, the quantity of the,
purchase offer...

... bidder, each bid in

the amount of said bid fraction size for a corresponding fractional portion of said product ;

c) closing the recording of bids upon request of the buyer;

d) transferring payment from the buyer to successful bidders ;

e) delivering said fractional portions from said successful bidders to said buyer .

In accordance with another aspect of the present invention there is provided a method of buying or selling products in fractional amounts on the Internet, said method comprising the steps of.

a) posting to a web...more fractions 40. A client 34 who is a buyer may create an order 42.

Order 42 is an offer to purchase one or more fractions 40 of product 38. A client 34 who is a buyer may also create an auction 36 which...

...may place bids, or in the case of a reverse auction, the amount they may offer to buy . Similarly a client seller's credit limit will limit the total amount of products that they will be able to auction or in the case of a reverse auction...case of a reverse auction., the buyer may wish to close the auction before the total amount of product originally requested has been offered for sale .

If the auction has been closed, step 166 is invoked to close the auction. If...

English Abstract

...of the invention include receiving a plurality of orders (a "package" that may include logically grouped items) offering to sell items and a package of orders offering to buy items. The method includes steps of allocating trading quantities of items to a portion of the

orders (14), and assigning trading prices for each item allocated a trading quantity...

Detailed Description

... invention include receiving any of a plurality of orders (a "package" that may include logically grouped items) offering to sell items, a package of orders offering to buy items, and a package of orders offering to buy and sell items. The method includes...

...items and a plurality of orders offering to buy items, at least one of the orders offering to trade a plurality of types of items; allocating trading quantities of items to a portion of the orders, the trading quantities satisfying trading constraints imposed by the orders; assigning - 2...

...of orders offering to buy items, at least one of the orders being an indifferent order offering to trade between a selection of different items among a plurality of types of items; allocating trading quantities of items to a portion of the orders, the trading quantities satisfying trading constraints imposed by the orders; assigning trading...

...items and a plurality of orders offering to buy items, at least one of the orders offering to trade a plurality of types of items; allocating trading quantities of items to a portion of the orders, the trading quantities satisfying trading constraints imposed by the orders; assigning trading...

...orders offering to buy items from a plurality of traders, at least one of the orders offering to trade a plurality of types of items; allocating trading quantities of items to a portion of the orders, the trading quantities satisfying trading constraints imposed by the orders; assigning trading...include both simultaneously. Orders may be logically connected with other orders to form strategies.

Simple orders are offers to buy or sell one type of security. A simple order specifies the item type, the asking or bid price, and a maximum quantity. The offer is for a buy or a sell according to whether the maximum quantity is positive or negative, respectively. The ...

Sales generation databases that can help salespeople avoid Willy Loman-like burnout include iMarket, Dun and Bradstreet, InfoUSA, and Harris InfoSource. Industry giants Dun and Bradstreet and InfoUSA are sources for clients. D&B's huge database is the foundation for iMarket's company information, and iMarket provides information for each company's **business type**, **names** of executives, annual sales if available, number of employees, and **type** of location. iMarket allows easy analysis using various criteria, and users need not use meter credits specific records are chosen for **purchase**. Harris InfoSource still **offers** directories in print and on CD-ROM and also provides the Selectory database **product**. Harris, which has about 400,000 listings for American manufacturers, emphasizes high-quality information, rather than building the largest database. Harris InfoSource Web site states 'We profile manufacturers because they represent the largest, most concentrated **group** of purchasers in the American economy, spending more than \$1.7 trillion each year on **products** and services.' Dun & Bradstreet provides a huge, varied collection of **products** and services, many of which are available from D&B and commercial online services; others allow users to affordably create or enhance business-to-business (B2B) customer databases.

Amazon.com, Yahoo!, Petopia.com, PetcoAnimal Supplies, and Advanced

Internet Technologies are highlighted in a discussion of smaller and mid-sized companies finding innovative ways to deploy e-commerce while circumventing problems on which larger players spend considerable sums. For instance, Amazon.com's zShops allows specialty retailers to offer unique items for sale and pay Amazon.com a fee for each individual listing based on selling price. Mid-sized companies have to have the resourcefulness of a harried housewife with a limited budget, but also have to be aware of the pitfalls of larger marketplaces such as Yahoo! or zShops. A mid-sized vendor can totally lose its individuality if the marketplace is merely a list of company names, but if the marketplace makes mid-sized companies' products too popular, such companies can be overwhelmed by huge amounts of traffic. Therefore, mid-sized companies may be better off with partners that offer help with branding that is customized to suite the companies' own goals. For instance, a public auction-type e-commerce site would not be a good choice for a company that does not want to make known its pricing strategy. According to one analyst, 'Some of the best bricks-and-clicks partnerships occur when the bricks side of the equation stops thinking of Internet start-ups as competition' and they become partners instead.

Hologix's Attricom (TM) is an integrated attribute-based product data and order management system for manufacturers. It enables businesses to plan and assess product designs, handle orders, and work with buyers within a framework that supports flexible control of products' attributes and specifications. Attricom is comprised of Product Composition, Order Management, Customer Direct, and Integration Framework. Product Composition aids manufacturers in: determining if they should make a particular product; forecasting design limits; examining their production capabilities; forecasting manufacturing limits; evaluating designs; and determining what changes are needed in order to make a product. This allows manufacturers to improve their efficiency and reduce products' time to market, increase the accuracy of documentation, and reduce cycle time. Product design groups can use Attricom PC to build models of their design specifications, build template-based specifications, and create specification hierarchies. The Attricom Integration Framework enables the system to send and receive data using XML, so that Attricom can integrate with existing enterprise applications. The Order Management component is a comprehensive order manager that offers order capture and reporting as well as collaboration features. It supports business-to-business (B2B) electronic commerce transactions, which can include buyer-seller collaboration, customer service links, and tandem collaboration via an extranet or the public Internet, and manufacturer-customer collaboration. Attricom Customer Direct (CD) gives buyers access to the seller's order system via an intranet or extranet. Purchasers can enter their own orders and can search for products by attribute. Attricom is based upon a multitier standard Java architecture.

Miva Merchant 2.0 from Miva is a browser-based Web storefront development and management system. Miva Merchant simplifies the building of electronic catalogs, as well as the handling of product orders and credit card charges. It is a modular, scalable system that allows merchants to build their own systems and that also supports custom programming in the Miva Merchant scripting language or in XML. Developers can link the Miva Merchant storefront to other Web sites, adding hyperlinks to customize and link forms, stores, and product categories. Order processing features of Miva Merchant 2.0 include: nestable product categories; catalogs can be linked to any Web page; unlimited sales tax and shipping options; online UPS freight charge calculations; flexible configuration of currency, with support for the Euro and VAT; online authorization of credit card purchases; e-mail order notification; SSL security; and Boolean product searching. Miva Merchant supports very large product databases. Its modules are easily integrated into existing HTML-based World Wide Web sites. Miva Merchant 2.0 will run on any UNIX or Windows NT site that has Miva Empresa installed. Miva offers a demonstration shopping site called Miva fresh.

FMS II-PURCHASING is Mitchell Humphrey's system for automating the purchasing cycle. The system allows users to track and report vendor information, track cost variances and vendor performance, streamline purchasing workflow, and distribute requisitioning tasks. Important

features of FMS II-PURCHASING include: user-created workflows; five-way matching among POs, inspection reports, receiving reports, bills, and freight charges; computation of special and normal charges, e.g., use tax or freight billed; allocation of computations to predefined accounts; unit of measure conversions; and automatic faxing of purchase orders to vendors. Vendor performance features of FMS II-PURCHASING include: copying of master records; prototype records; master vendors; multiple addresses per vendor; and commodity tracking by vendor. FMS II-PURCHASING streamlines document entry through flexible editing and validation functions. Requisition features include: user-defined approval paths; automatic conversion of approved requisitions to POs; decentralized tracking and entry; funds checking; automatic selection of vendors by **commodity class**; date-sensitive pricing; automatic updating of inventory when a PO is generated; and tracks orders throughout the entire purchasing cycle. Receiving functions include: tracking of cost variances; the ability to match freight invoices with receiving reports; identifies items needing inspection; adjusts inventory automatically; and stores user-defined reason codes for inspection rejections. FMS II- **PURCHASING** offers sophisticated analysis and reporting functions to control purchasing. Users can review information by item or document, view inspection results or freight status, produce reports of vendors' historical performance over a variety of time periods, or analyze the potential impact of a price change. FMS II-PURCHASING can also be used with FMS-ONRAMP or EXEC to use spreadsheets or OLAP tools to analyze purchasing data.

Orders of Magnitude, offered by OrderFusion (TM), automates suppliers' product presentation, sales, order management, sales support, and sales analyses processes. Orders of Magnitude includes the eAnalytics, eAuctions, eBilling, eFulfillment, eMarketing, eOrderManagement, eProducts, eQuotes, and eXchange Connect modules. The system's eAnalytics component generates ad hoc reports, along with preconfigured or customized reports. It also creates sales journals and inventory summary reports. Orders of Magnitude's eAuctions module supports dynamic pricing, **buyer -specific bidding**, and scheduled bidding. The eBilling module offers accounts receivable reports, invoicing, general ledger mapping, and credit card processing. Orders of Magnitude's eFulfillment component provides users

with order fulfillment status information and back-order shipment management features. It also includes inventory, packing slip, manifest, and e-mail notification options. The eMarketing module supports upselling and cross-selling techniques and can generate automated e-mail marketing campaigns. It also analyzes customers' buying patterns. eOrderManagement supports remote and multi-channel order entry with return processing. Orders of Magnitude's eProducts offers customer-specific pricing, data consolidation, and automated product segmentation features. The system's eQuotes offers personalized self-service and automated quote options. The eXchange Connect module supports communication between buyers and sellers. Multiple quotes are consolidated into single orders.

Emptoris's ePASS (TM) 3.0 Web-based collaborative sourcing suite offers supplier relationship management, sourcing collaboration, request for quote (RFQ) workflow, and decision support features. Using ePASS 3.0, companies can handle end-to-end sourcing and collaboration demands across supply chains. The system offers spending analysis, supplier allocation, and contract management features that benefit buyers and suppliers. For example, after receiving supplier bids, buyers can tap ePASS 3.0 to analyze purchasing scenarios. ePASS 3.0's Demand Aggregation also allows buyers to aggregate similar items across sourcing requests. Multi-tier Quote Roll Up allows sellers to collaborate on single RFQ bid responses, merging subcomponents into one response. ePASS 3.0's supplier relationship management (SRM) capabilities provide buyers with centralized supplier information. Data includes supplier profiles, historical activity, and performance ratings. Decision support features reference margin, delivery, supply base, contract compliance, and other parameters. ePASS 3.0 employs Java and eXtensible Markup Language (XML) technologies.

Accompany now MobShop.com, Mercata.com, and Zwirl.com are Web-based group buying services that offer the benefits of group discounts to individual consumers. These services offer lower prices based on demand. There is a specified period during which a group of buyers can get the lowest price if enough people commit to buying an item at that price. Accompany and Zwirl show each price level and the number of buyers needed to reach each level, but Mercata only reveals the starting and current price, not the number of users who have placed orders either above or below that price. Mercata's products range from baby products to garden products. Accompany offers computer and electronic products. Zwirl sets product categories, but lets buyers create their own groups around products according to their preferences. America Online (AOL) and Yahoo! have announced that they will build or acquire group buying services sometime in 2000.

New business-to-business network services sell businesses' unwanted inventory that would otherwise take up warehouse space and tie up funds. Traditional auctioneers, brokers, and liquidation firms are often inefficient, but their online alternatives can match buyers and sellers directly. An increasing number of companies are competing in this estimated \$350 billion market for overstock inventory, and some of them are already beginning to consolidate. FreeMarkets, for instance, announced that it will purchase iMark.com and create FreeMarkets Asset Exchange marketplace. Hewlett-Packard has increased its return on excess goods by switching from traditional brokers to ZoneTrader. ZoneTrader also eliminates some work for HP by testing the products and refurbishing systems, and it provides a guarantee with each product sold. ZoneTrader has plans in the works to sell inventory for Ford Motor and Dow Chemical Company, which have both announced investments in ZoneTrader.com. Web services differ in the **types** of **goods** they sell, whether they acquire the goods themselves or simply link buyers and sellers, and how much help the **offer** in checking **buyers** ' credentials and conducting transactions. The primary selling point of these services seems to be their global reach, matching sellers in Canada with buyers in South Africa, for instance. Still, some analysts question the long-term value of selling excess inventory online and say that donating goods to charity and getting tax breaks could be more profitable.

A senior market manager for Dow Chemical Company sings the praises of auction systems, calling them fantastic tools that 'allow us to diversify our supply base and create a dynamic marketplace for buying and selling.' He says, 'Now I can reach a competitive market price very quickly and with much less effort than phoning around and taking bids manually. I can do it in a matter of hours instead of a matter of weeks.' This resoundingly favorable assessment of business-oriented auctions is a good example of why business-to-business (B2B) auctions are increasingly used by buyers and sellers. Dow, for instance can find new customers at auctions, and as a buyer, Dow can use online auctions to find lower prices for the tons of raw materials and packaging needed to manufacture and ship its products. The supply manager on average saves between 2 and 5 percent on purchases via online auctions, and sometimes up to 20 percent. Internet auctions are a simple way to meet new partners while eliminating drawn-out sales processes. Unlike traditional auctions, online participants can take part in B2B auctions from anywhere in the world on a 24x7 basis. John Deere Company, for instance, constructed an auction site to reach new customers, and hosts its site with IT assistance from OpenSite Technologies, a vendor

of auction software. All types of goods can be sold through online auctions, including chemicals, steel, electronics, and unused stock. Auctions also help companies determine how to evaluate security needed for purchasing and bidding online and how to integrate payment into their general ledgers.

This overview of online shopping cites numerous bot- and portal- based engines to highlight the current complexity and plethora of shopbots. Deal's Deal of Day aggregates all information on merchant special offers available online and should serve as the beginning point of anyone's online shopping experience. smartshop.com represents merchants merging price-focused shopping with new user- preference schemes, theoretically finding the lowest total cost on specific products among affiliate merchants. Unfortunately, inaccuracies in price, tax, and shipping costs or availability seriously impact the value of this type of shopping agent. iChoose exemplifies a shopping agent that offers the convenience of a single wallet system. Shopping sites offering rebate schemes based on shopping habits include ebates.com and PointClick.com. These online shopping agents best serve shoppers seeking a particular store, brand, or product, not those who need sales or service advice. Mid-market, full-service sites such as GetPlugged.com offer buying advice with other services. Bargain hunters can choose NexTag or online outlet stores such as Bluefly and Brandmania, which simulate the factory-warehouse stores dotting the suburban landscape, are perfect for shoppers who thrill to serious price discounts. The Web also hosts sites such as Kosmo.com or Urbanfetch.com, which offer free delivery within a specified time period for a limited selection of products.

Enterprise resource planning (ERP) companies are trying to capture some of the lucrative customer relationship management (CRM) market as a means to improve revenue and lower costs. Oracle, SAP AG, PeopleSoft, Baan, and J.D. Edwards are ERP vendors that are now offering CRM applications, and they are in direct competition with front-office CRM vendors like Seibel Systems, Clarify, Vantive Corporation, BroadVision, and Vignette. While ERP vendors are strengthening their front-end systems, CRM vendors are improving their back-end products in an effort to address integration issues. Both groups of vendors are using new products, partnerships, and acquisitions to build their share of the market. Oracle is leading the ERP market with its suite of 35 CRM products, and Seibel Systems is the leader in the CRM marketplace. Seibel has recently partnered with ERP vendor J.D. Edwards to integrate Seibel's front-end system with J.D. Edwards' OneWorld enterprise platform. SAP has just launched its first CRM applications, and PeopleSoft has purchased Vantive in its bid for the CRM market.

TradeOut.com, an online auction site for excess inventory and idle assets, counts among its customers BP Amoco, Georgia-Pacific, Gulf Telephone, IBM, Morgan Stanley, and Ralston Purina. Companies post their lots of excess inventory on TradeOut.com's Web site, and interested purchasers bid for them. The Web is used to replace the otherwise maze-like set of tasks required to reach industrial liquidators, brokers, and business auction companies by phone, fax, and trade journal ads. TradeOut.com has items in almost 100 categories, including computers, furniture, and steel products. Brin McCagg, TradeOut.com's founder, chairman, and CEO, says 'It's a universal problem for any CFO...Excess inventory ties up capital, physical space, and management time.' The average sale is \$25,000, but last

month TradeOut.com brokered a \$2.9 million deal for surplus diesel generators. Over 10,000 companies have posted, sold, or purchased on the site. Customers praise TradeOut.com's huge time-saving advantages. For instance, Gulf Telephone located, bid for, and bought nearly \$1 million in fiber-optic cable in only three days. The same task would have required two to three weeks without TradeOut.com. According to analysts, TradeOut.com has little competition in the horizontal business-to-business auction market.

A new search engine technology from Inktomi called Shopping Engine is already being used by over 20 Web portal sites and 350 online merchants. Based on technology acquired by purchasing C2B Technology last year, the new Inktomi engine will offer Web shoppers product searches, price comparisons, merchandising, and purchasing services for products from 14 product categories. Inktomi's Shopping Engine will be featured at C|Net's Snap, CNNfn, Disney's Go Network, and GeoCities. A variety of shopper incentives and personalization features will be offered to repeat customers. Inktomi expects to collect massive amounts of online advertising and per-transaction revenues that will be between 5 and 20 percent per transaction. The new engine will feature product reviews from Consumers Digest, direct user feedback, product reviews, support for digital wallets, and extensive links to participating vendor sites. Inktomi also expects to offer a universal shopping cart, which will allow products to be added to online shopping baskets from disparate manufacturers, by the end of 1999.

Trilogy Development Group's Buying Chain server software will make it easy to purchase corporate supplies over an intranet. The software deeply undercuts other procurement packages, and represents a new class of low-priced Internet purchasing packages. The **Buying Chain offering** represents new growth for buyer-side electronic commerce. However, the product sacrifices some catalog management, back-end integration, and real-time decision support included in higher-end systems. Some potential customers are concerned that Buying Chain cannot send information into the purchasing databases easily, and it would therefore defeat the strategic purpose for developing these sorts of systems. Internet purchasing systems are self-service applications, which lets employees purchase operating supplies. They include a controlled catalog, automated requisitioning, approval administration, and links to payment systems and centralized reports. The purpose is to save money through reductions in off-contract purchases and incorrect orders. However, few companies are using the technology today. With Buying Chain, purchasing managers can set up recommended products and approval hierarchies ahead of time.

Shopping robots are personal shopping agents that assist consumers in finding a product over several electronic sites. Examples of these shopbots include MX BookFinder, PriceWatch, Bottom Dollar, Netbot's Jango, Ziff Davis's Netbuyer, Andersen's BargainFinder, and Shopping Explorer, each of which is targeted at a slightly different audience. MX BookFinder focuses on books, and offers shoppers a wide selection of bookstores. It offers superior search capabilities, and lets shoppers search by author, title, ISBN, type of book, and price range. Pricewatch is for people looking for computer products. It has a plain but effective interface, and presents results in a well-laid out matrix. Dealer names and brand names are hot-linked for direct information. WebCentric's Bottom Dollar searches for

low-priced goods in multiple categories . It does not have a browse option, but it has keyword searching and a merchandise - type filter. Roboshopper places a window on top of a browser, and offers to select a product type through pull-down menus. Roboshopper has several merchandise categories , including computer hardware and software, books, movies, music, clothing, cars and trucks, and many others. After selecting a broad category, shoppers select additional filters to narrow down the search. Shopping Explorer is highly customizable and has several useful features and 20 merchandise categories .

A catalog created for Blue Cross and Blue Shield Association by Requisite Technologies can pull product listings from specific vendors' World Wide Web sites, and can draw out all the marketing literature; it also groups identical products under headings. Each product in a group is listed with its name and price. This product category is an extranet known as a universal catalog, and it has some software and office supply vendors concerned that they could lose money if the technology catches on with users. Some of Blue Cross' vendors say the catalogs could cause erosion in profits forecast when detailed contracts were first negotiated, including contracts based on product-by-product pricing. Universal catalog extranets constantly update product information to all of a company's buyers, so that they can select the lowest-priced items, such as pens, desks, and other office supplies. One user, an e-commerce manager, says that on first use the technology seems astoundingly powerful for its ability to streamline comparison shopping. Since all contracts have items that have small profit margins, and other items on which the vendor makes more profit, vendors have counted on customers buying enough of the high-profit items to make the low prices possible. Universal catalog extranets break this unspoken, unwritten agreement because buyers can easily find all the low-priced items.

This guide to shopping for remote session control software looks at the different elements these products must also satisfy, including the need to access services such as network volumes, network applications, and print services. Finding the best remote control package for an enterprise requires a thorough understanding of network configurations, applications needs, and security policies. Many of the remote control software packages, such as Stac's ReachOut 7.0, Symantec's pcAnywhere, and Remote Desktop 32, all contain similar features. How these features are implemented is what sets them apart. Considerations to look for include support for the network protocols. IP/IPX is sufficient for most networks, but not for networks using NetBIOS or Banyan VINES. In addition, the Internet requires features such as data encryption. Besides offering valuable consumer insights, this article includes a comprehensive buyers guide that offers information on operating systems, the number of concurrent connects the host machine can run, whether the host machine accepts multiple connections over the same protocol, and whether the application can be password-protected by administrators.

IBM's Project Eagle has been released and renamed Software Server Series. Software Server is an attempt to compete against Microsoft's BackOffice Suite. The IBM offering is available as seven server-integrated packages, consisting of 57 existing products. The applications combine to make Software Servers a full enterprise systems management solution that is easier to operate and less expensive than BackOffice. The suite includes Lotus Notes as well as servers for database, transaction, Internet, communications, system management, and directory security. Although the seven servers are able to work together, they can be purchased

separately. The IBM offering is scalable and multi-platform. BackOffice, on the other hand, does not include a transaction server. IBM points to the widespread availability of transaction monitors available on Windows NT which minimize the need for a transaction server.

Microsoft recently announced an aggressive strategy for gaining Windows NT users from the VINES installed base. Microsoft offers a collection of migration tools and technical consulting know-how to ease integration of existing VINES systems and Windows NT servers. Some users say VINES is much more full-functioned than Windows NT, but many others welcome Windows NT's interoperability in the absence of commitments by Banyan Systems to upgrade VINES. An analyst says the vulnerability of Banyan's markets will substantially increase during Summer 1996, as Microsoft moves to convert VINES users to Windows NT instead of making an offer to buy Banyan. Mike Nash, Microsoft's group product manager for Windows NT Server, says Microsoft will provide a 'vehicle for high-level knowledge transfer.' VINES users say they can use the assistance, considering Banyan's current movement away from VINES development.

TITLE: Moore May Acquire Wallace
AUTHOR: Dixon, Mary McKenzie
SOURCE: Business Documents, v8 n8 p1(3) Sep 1995

RECORD TYPE: Review
REVIEW TYPE: Company

Moore Corporation has made a hostile bid to purchase Wallace Computer Services. This move, if completed, will combine two of the largest forms providers in North America. Many people say that Moore has decided to acquire Wallace because of a jump in the share price of Wallace a week before the bid. Moore received a loan that would help with the acquisition, but it may have to put more money together. If the companies were to join, there would be many benefits for Moore. Most importantly, it would increase its customer base by combining its forms and print management, labels and direct mail product and service divisions with those of Wallace.

Engineers with Web access can get parts information from distributors' home pages around the clock. Many Internet-based distributors' and marketers' home pages are simply online catalogs of electronics parts; others permit the engineer to download data sheets for items, review company information, and order parts. Some distributors offer online technical support, technical information, software design tools, and comprehensive reference designs that can shorten the development cycle. One provides a special Design Resource service with links to other Internet locations with more specialized information on, for example, digital signal processing (DSP). The CEO of one such parts distribution firm says activity in the late PM hours and early AM hours is as strong as during working hours. A list of distributor sites with Web addresses is provided.

Umang Gupta, Gupta Chairman and CEO, assures worried customers that the client/server tool developer can get back in the black, after posting \$24 million in losses in 1994. Gupta plans to boost sales with **component-based products** for Windows 95 that work with other developers' products. After rejecting a buyout bid from Oracle in 1994, Gupta had a management shake-up and set new goals for developing flexible products. Sam Inman, formerly an IBM exec and now Gupta president and chief operation officer, moved aggressively to bolster indirect sales and works to improve communications internally and with other companies. Gupta has a deal to bundle SQLWindows with Microsoft SQL Server, a move away from Gupta's former NetWare-centric development efforts. Gupta plans more such arrangements, with IBM, Lotus, and Oracle, but will remain an independent company for the time being.

Four leading contact managers are described. Symantec's ACT! for Windows 2.0 manages contacts, activities, and time allocation. ACT! features a contact database, a calendar, and a word processor. ACT! contains many features but lacks expense-tracking and other sales and marketing specific features. Action Plus's Action Plus for Windows 1.51 is geared toward sales professionals and contains templates for **bids**, quotes, forecasts, and **orders**. ELAN's GoldMine for Windows 2.5a lets users maintain client/contact information, schedule appointments, track calls and tasks, and dial phone numbers. Modatech Systems' Maximizer for Windows 1.2 is an excellent **product** that combines ease of use with a flexible, customizable client/contact database.

Canadian Imperial Final Results Part 1

Regulatory News Service (RNS)

Tuesday, December 12, 2000

JOURNAL CODE: APFW LANGUAGE: ENGLISH RECORD TYPE: Fulltext

DOCUMENT TYPE: Newswire

WORD COUNT: 8,527

LEAD PARAGRAPH:

THESTART RNS Number:4695V Canadian Imperial Bank of Commerce 7 December 2000 PART 1 CIBC REPORTS RECORD EARNINGS OF \$2.06 BILLION FOR 2000 Toronto, Dec. 7, 2000 - CIBC today reported record results for the year ending Oct. 31, 2000. Among the achievements were the following: -Net income of \$2,060 million, versus \$1,029 million in 1999. -Basic earnings of \$4.97 per share and return on equity of 20.5 per cent, compared to \$2.23 per share and 9.8 per cent a year ago. -Annualized savings of almost \$600 million in base operating expenses. -Best total shareholder return - 57.5 per cent - of any Canadian bank, -Capitalization ratios that are among the strongest in the industry. -Repurchase of 26.5 million common shares. -A near doubling of customers at CIBC's Amicus electronic bank (President's Choice Financial, Marketplace Bank, Safeway SELECT Bank). -More than \$1.1 billion in net income at CIBC World Markets. "CIBC's strong performance reflected excellent results across all our businesses," said CIBC chairman John Hunkin. "For the fourth consecutive quarter, we exceeded our targets for return on equity, earnings growth and capital strength "We will continue to implement a number of key strategies to drive growth in revenues and earnings. We will also continue to reallocate capital to those businesses, with the greatest potential for expansion. These initiatives will help us meet our commitment to provide the best shareholder return of any Canadian bank by 2002." Strategies - Aggressively acquire customers in e-commerce using the Amicus platform. - Enhanced focus on the retail and small business customer. - Exploit CIBC's distribution advantage in wealth management. - Leverage CIBC World Markets' North American full service platform and strength in merchant banking. Successes - Created Amicus to consolidate CIBC's co-branded retail electronic banking businesses. - Hedged most of the remaining 47 million share investment in Global Crossing Ltd. - Formed strategic alliance with Safeway Inc. to deliver electronic banking services to US customers. - Chosen by Yahoo! Inc to provide Yahoo! PayDirect US customers with a quick, easy way to receive and send payments over the Internet. - Became first Canadian bank to advise on and sell securities including third party investments nationally through branches. - Unveiled bizSmart with The Business Depot Ltd., a new e-banking and e-commerce banking offer to provide Canadian small businesses with access to no-fee online daily banking. - Improved customer satisfaction in retail banking. - Capitalized on our wholesale banking capability. Equity new issue activity jumped 33 per cent and mergers and acquisition business rose 50 per cent. Highlights of the quarter ending Oct. 31, 2000 - Earnings of \$332 million or 80 cents a share, up \$324 million from a year ago. - After allowing for a number of unusual items, net income was \$412 million, up \$95 million or 30 per cent from the fourth quarter of 1999. Similarly adjusted basic earnings per share were 99 cents compared with 72 cents in 1999. - Revenues of \$3,018 million, an increase of \$582 million or 24 per cent. - Tier 1 capital of 8.7%. Repurchased 7.6 million shares. - A one-time charge of \$250 million to the student loan business, with the expiry of the federal government contract; we expect no further provisions on the Class A and Class B loans going forward. - A \$100 million addition to the general loan loss provision. More details about CIBC's financial performance are contained in the following Report to Shareholders. Report to Shareholders for the Fourth Quarter, 2000

HOUSTON, Jun 26, 2000 (BUSINESS WIRE) -- iExalt, Inc. (OTCBB:IXLT), a
provider of Internet products and services to the Christian community,
families and businesses, announced today that it has formed an affiliate
relationship with CCBid.com, a new Internet auction site designed
specifically for Christians. As a result of this relationship, iExalt users
will be able to access CCBid's auction services through a dedicated channel
on www.iExalt.com.

"When we formed iExalt, our goal was to create a safe and efficient

Internet environment for Christian families and businesses," said Jack I. Tompkins, iExalt's chairman and chief executive officer. "The relationship with CCBid.com enables us to offer our users an online auction, a feature that has become quite popular, while protecting them from offensive and dangerous materials at the same time."

Expansion strategies in international markets: An exploratory study
Gronhaug, Kjell; Kvitastein, Olav
Scandinavian International Business Review v1n1 PP: 57-70 1992
ISSN: 0962-9262 JRNL CODE: SIB
WORD COUNT: 5462

...TEXT: way that sufficient resources are retained allowing for survival and growth (p. 11).

For the **business firm** , the **market** , i.e. actual and potential customers, usually represents its most important constituency. In order to survive and grow a sufficient number of customers must be willing to **buy** its product/service **offerings** at prices that at least cover costs, and thus the **firm's market dependence** as emphasized above.

It is almost a truism that firms start doing business in...following categories were developed:

- (1) Raw materials
- (2) Manufactured products
- (3) Services
- (4) High-tech **products** .

The **grouping** was chosen because the categories used are close to standard terminology. It is believed that...

... Rather they expanded into present (and new) markets with their existing products. Thus firms offering **several product categories** seemingly start with one or a limited number of products and, as new opportunities are...

Brand Portfolios
Barwise, Patrick; Robertson, Thomas
European Management Journal v10n3 PP: 277-285 Sep 1992

...TEXT: this. China is relegated to providing products for world markets that are generally sold under brand names owned by companies in other countries. Typically, much of the value added is tied to the brand name, as in the clothes or toys that China exports to world markets. It is the owner of the brand name who captures most of the value, not the OEM producer of the product to be branded. This can be seen as well in the relative weakness of Korean brand names, such as Gold Star--and the lower prices that must, therefore, be offered to attract world buyers --versus Japanese brand names (ignoring, of course, any continuing differences in technology of quality).

Managers have to wrestle with...learning from the UK experience and are now matching the quality of major brands in many product categories (Morgenson, 1991).

The creation of manufacturers' brand portfolios can be seen as a countervailing force...development of international markets, especially the Single European Market. This suggests a growing concentration in many product categories and the need to develop panEuropean brand strategies. The ability to succeed with limited brands...
